today even the war and conflict coverage of 24 hour news networks is subject to heavy promotion and part of the networks advertising and branding campaigns these commercial aspects of news production however seem to oppose concepts of journalistic quality this study analyses claims of journalistic quality and high concept in conflict coverage promotion spots and how they are linked to better understand the ideological complexes of cnn international and al jazeera english the findings show an equal number of quality and high concept claims with differences in the nature of the claims between the two networks strong patterns are found in quality and high concept claims of both 24 hour television news networks the largest number appears in the visual mode the research also shows that analysing this kind of media text needs to be multimodal and that a social semiotic approach is appropriate for analysing claims making and linking in conflict coverage promotional spots

are there universal principles of coordinated group motion and if so what might they be this carefully edited book presents how natural groupings such as fish schools bird flocks deer herds etc coordinate themselves and move so flawlessly often without an apparent leader or any

form of centralized control it shows how the underlying principles of cooperative control may be used for groups of mobile autonomous agents to help enable a large group of autonomous robotic vehicles in the air on land or sea or underwater to collectively accomplish useful tasks such as distributed adaptive scientific data gathering search and rescue or reconnaissance

this book presents a detailed discussion of the models that were developed to simulate the collapse and post collapse behavior of steel pipes the finite element method offers to engineers the possibility of developing models to simulate the collapse behavior of casings inside oil wells and the collapse behavior of deepwater pipelines however if technological decisions are going to be reached from these model results with implications for the economic success of industrial operations for the occupational safety and health and for the environment the engineering models need to be highly reliable using these models engineers can quantify the effect of manufacturing tolerances wear corrosion etc this book describes in great details the experimental programs that are developed to validate the numerical results
