this book presents a compilation of over 200 numerical problems and solutions that students can use to learn practice and master the inventory control and management concepts intended as a companion to any of the standard textbooks in inventory control and management and written in simple language it illustrates very clearly the steps students need to follow in order to solve a given problem it also explains which solution methodologies can be used under which circumstances

offering an ideal one stop resource for mid level engineering and business students who have taken inventory management or a related subject as an elective this book is the only one students will ever need to prepare and gain confidence for their examinations in this subject

with the pressure of time based competition increasing and customers demanding faster service availability of service parts becomes a critical component of manufacturing and servicing operations service parts management first focuses on intermittent demand forecasting and then on the management of service parts inventories it guides researchers and practitioners in finding better management solutions to their problems and is both an excellent reference for key concepts and a leading resource for further research demand forecasting techniques are presented for parametric and nonparametric approaches and multi echelon cases and inventory pooling are also considered inventory control is examined in the continuous and periodic review cases while the following are all examined in the context of forecasting error measures distributional assumptions and decision trees service parts management provides the reader with an overview and a detailed treatment of the current state of the research available on the forecasting and inventory management of items with intermittent demand it is a comprehensive review of service parts management and provides a starting point for researchers postgraduate students and anyone interested in forecasting or managing inventory

new technologies are revolutionising the way manufacturing and supply chain management are implemented these changes are delivering manufacturing firms the competitive advantage of a highly flexible and responsive supply chain and manufacturing system to ensure that they meet the high expectations of their customers who in today s economy demand absolutely the best service price delivery time and product quality to make e manufacturing and supply chain technologies effective integration is needed between various often disparate systems to understand why this is such an issue one needs to understand what the different systems or system components do their objectives their specific focus areas and how they interact with other systems it is also required to understand how these systems evolved to their current state as the concepts used during the early development of systems and technology tend to remain in place throughout the life cycle of the systems technology this book explores various standards concepts and techniques used over the years to model systems and hierarchies in order to understand where they fit into the organization

and supply chain it looks at the specific system components and the ways in which they can be designed and graphically depicted for easy understanding by both information technology it and non it personnel without a good implementation philosophy very few systems add any real benefit to an organization and for this reason the ways in which systems are implemented and installation projects managed are also explored and recommendations are made as to possible methods that have proven successful in the past the human factor and how that impacts on system success are also addressed as is the motivation for system investment and subsequent benefit measurement processes finally the vendor user supply demand within the e manufacturing domain is explored and a method is put forward that enables the reduction of vendor bias during the vendor selection process the objective of this book is to provide the reader with a good understanding regarding the four critical factors business physical processes systems supporting the processes company personnel and company personal performance measures that influence the success of any e manufacturing implementation and the synchronization required between these factors discover how to implement the flexible and responsive supply chain and manufacturing execution systems required for competitive and customer focused manufacturing build a working knowledge of the latest plant automation manufacturing execution systems mes and supply chain management scm design techniques gain a fuller understanding of the four critical factors business and physical processes systems supporting the processes company personnel performance measurement that influence the success of any e manufacturing implementation and how to evaluate and optimize all four factors

the safe and reliable performance of many systems with which we interact daily has been achieved through the analysis and management of risk from complex infrastructures to consumer durables from engineering systems and technologies used in transportation health energy chemical oil gas aerospace maritime defence and other sectors the management of risk during design manufacture operation and decommissioning is vital methods and models to support risk informed decision making are well established but are continually challenged by technology innovations increasing interdependencies and changes in societal expectations risk reliability and safety contains papers describing innovations in theory and practice contributed to the scientific programme of the european safety and reliability conference esrel 2016 held at the university of strathclyde in glasgow scotland 25 29 september 2016 authors include scientists academics practitioners

regulators and other key individuals with expertise and experience relevant to specific areas papers include domain specific applications as well as general modelling methods papers cover evaluation of contemporary solutions exploration of future challenges and exposition of concepts methods and processes topics include human factors occupational health and safety dynamic and systems reliability modelling maintenance optimisation uncertainty analysis resilience assessment risk and crisis management

the covid 19 pandemic represents an extraordinary inflection point that caught airlines worldwide unprepared causing ceos to recalibrate their business models this book explains why this unprecedented pandemic is different from the past disruptions experienced by the airline industry during the past 50 years and what airlines and related businesses now can do to adapt to the dramatically changed marketplace this book presents two future scenarios continuous improvements and elastic supply these are considered in three specific contexts for the rebuilding of the airline business these contexts in the order of urgency with respect to change from the status quo are the following the first context is for airlines to become better prepared to deal with frequent and deeper disruptions that could be localized or globalized relating to such areas as climate change geopolitics and cybersecurity the second context is to collaborate and integrate within the much broader travel ecosystem possibly using platforms to innovate on new value systems the third context which has always been the case and drives the first two is for airlines to offer real solutions to people s travel needs solutions developed with imagination and turbocharged innovation even as we contemplate new technology airplanes and mobility as a service solutions this book is recommended reading for all senior level practitioners of airlines and related businesses as well as aviation policy makers worldwide

issues for include annual air transport progress issue
