this book is a comprehensive introduction to the mathematical theory of vorticity and incompressible flow ranging from elementary introductory material to current research topics while the contents center on mathematical theory many parts of the book showcase the interaction between rigorous mathematical theory numerical asymptotic and qualitative simplified modeling and physical phenomena the first half forms an introductory graduate course on vorticity and incompressible flow the second half comprise a modern applied mathematics graduate course on the weak solution theory for incompressible flow

an essential resource for advanced undergraduate and beginning graduate students in quantitative subjects who need to quickly learn some serious mathematics

a passage to modern analysis is an extremely well written and reader friendly invitation to real analysis an introductory text for students of mathematics and its applications at the advanced undergraduate and beginning graduate level it strikes an especially good balance between depth of coverage and accessible exposition the examples problems and exposition open up a student's intuition but still provide coverage of deep areas of real analysis a yearlong course from this text provides a solid foundation for further study or application of real analysis at the graduate level a passage to modern analysis is grounded solidly in the analysis of \mathbb{R} and \mathbb{R}^n but at appropriate points it introduces and discusses the more general settings of inner product spaces normed spaces and metric spaces the last five chapters offer a bridge to fundamental topics in advanced areas such as ordinary differential equations fourier series and partial differential equations lebesgue measure and the lebesgue integral and hilbert space thus the book introduces interesting and useful developments beyond euclidean space where the concepts of analysis play important roles and it prepares readers for further study of those developments

during field and court based sports players are continually required to perceive their environment within a match and select and perform the most appropriate action to achieve their immediate goal within that match instance this ability is commonly known as agility considered a vital quality in such sports and may incorporate a variety of locomotion and instantaneous actions multidirectional speed is a global term to describe the competency and capacity to perform such actions accelerate decelerate change direction and ultimately maintain speed in multiple directions and movements within the context of sports specific scenarios encompassing agility speed and many other related qualities multidirectional speed in sport depends on a multitude of factors including perceptual cognitive abilities physical qualities and the technical ability to perform the previously mentioned actions multidirectional speed in sport research to application reviews the science of multidirectional speed and translates this information into real world application in order to provide a resource for practitioners to develop multidirectional speed with athletes bringing together knowledge from a wealth of world leading researchers and applied practitioners in the area of speed and agility to provide a

complete resource to assist practitioners in designing effective multidirectional speed development programmes this text is critical reading for undergraduate and graduate sports science students all individuals involved in training athletes e g coaches physiotherapists athletic trainers and researchers in the field of sports science and sports medicine

for a one year graduate level course in partial differential equations designed to bridge the gap between introductory texts in partial differential equations and the current literature in research journals this text introduces students to the basics of classical pdes and to a wide variety of more modern methods especially the use of functional analysis which has characterized much of the recent development of pdes throughout the results are almost completely self contained

this book covers the subject matter that is central to mathematical analysis measure and integration theory some point set topology and rudiments of functional analysis also a number of other topics are developed to illustrate the uses of this core material in important areas of mathematics and to introduce readers to more advanced techniques some of the material presented has never appeared outside of advanced monographs and research papers or been readily available in comparative texts about 460 exercises at varying levels of difficulty give readers practice in working with the ideas presented here
