as the author of this volume states the science of logic does not stand still this book was intended to cover the advances made in the study of logic in the first half of the nineteenth century during which time the author felt there to have been greater advances made than in the whole of the preceding period from the time of aristotle advances which in her eyes were not present in contemporary text books as such this book offers a valuable insight into the progress of the subject tracing this frenetic period in its development with a first hand awareness of its documentary value

one of the most important divisions in the human mind is between perception and reasoning we reason from information that we take ourselves to have already but perception is a means of taking in new information reasoning can be better or worse but perception is considered beyond reproach the rationality of perception argues that these two aspects of the mind become deeply intertwined when beliefs fears desires or prejudice influence what we perceive when the influences reach all the way to perceptual appearances we face a philosophical problem is it reasonable to strengthen what one believes or fears or suspects on the basis of an experience that was generated by those very same beliefs fears or suspicions drawing on examples involving racism emotion and scientific theories siegel argues that perception itself can be rational or irrational and makes vivid the relationship between perception and culture

first published in 1961 inductive probability is a dialectical analysis of probability as it occurs in inductions the book elucidates on the various forms of inductive the criteria for their validity and the consequent probabilities this survey is complemented with a critical evaluation of various arguments concerning induction and a consideration of relation between inductive reasoning and logic the book promises accessibility to even casual readers of philosophy but it will hold particular interest for students of philosophy mathematics and logic

the sense of agency is defined as the sense of oneself as the agent of one's own actions this also allows oneself to feel distinct from others and contributes to the subjective phenomenon of self consciousness gallagher 2000 distinguishing oneself from others is arguably one of the most important functions of the human brain even minor impairments in

this ability profoundly affect the individual's functioning in society as demonstrated by psychiatric and neurological syndromes involving agency disturbances della sala et al 1991 franck et al 2001 frith 2005 sirigu et al 1999 but the sense of agency also plays a role for cultural and religious phenomena such as voodoo superstition and gambling in which individuals experience subjective control over objectively uncontrollable entities wegner 2003 furthermore it plays into ethical and law questions concerning responsibility and guilt for these reasons a better understanding of the sense of agency has been important for neuroscientists clinicians philosophers of mind and the general society alike significant progress has been made in this regard for example philosophical scrutiny has helped establish the conceptual boundaries of the sense of agency bayne 2011 gallagher 2000 2012 pacherie 2008 synofzik et al 2008 and scientific investigations have shed light on the neurocognitive basis of sense of agency including the brain regions supporting sense of agency chambon et al 2013 david et al 2007 farrer et al 2003 2008 spengler et al 2009 tsakiris et al 2010 yomogida et al 2010 despite this progress there remain a number of outstanding questions such as are there cross cultural differences in the sense of agency how does the sense of agency develop in infants or change across the lifespan how does social context influence sense of agency what neural networks support sense of agency i.e connectivity and communication between brain regions what are the temporal dynamics with respect to neural processes underlying the sense of agency i.e the what and when of agency processing how can different cue models of the sense of agency be further specified and empirically supported especially with regards to cue integration weighting what are the applications of sense of agency research clinically engineering etc the concept of the sense of agency offers intriguing avenues for knowledge transfer across disciplines and interdisciplinary empirical approaches especially in addressing the aforementioned outstanding questions the aim of the present research topic is to promote and facilitate such interdisciplinarity for a better understanding of why and how we typically experience our own actions so naturally and undoubtedly as ours and what goes awry when we do not we thus welcome contributions from for example i neuroscience and psychology including development psychology neuroscience ii psychiatry and neurology iii philosophy iv robotics and v computational modeling in addition to empirical or scientific studies of the sense of agency we also encourage theoretical contributions including

when asked in 1962 on what he was working kazimierz ajdukiewicz replied several years ago polish scientific publishers suggested that i prepare a new edition of the logical foundations of teaching which i wrote 1 before 1939 as a contribution to the encyclopaedia of education it was a small booklet covering elementary information about logical semantics and scientific methodology information which in my opinion was necessary as a foundation of teaching and as an element of the education of any teacher when i recently set to preparing the new edition i rewrote practically everything and a booklet of some 100 pages swelled into a bulky volume almost five times bigger the issues have remained practically the same but they are now analysed much more thoroughly and the threshold of difficulty is much higher now the main stress has been laid on the methods used in the empirical sciences and within that field on the theory of measurement and the methods of statistical inference i am now working on the last chapter of the book concerned with explanation procedures and theory construction in the empirical sciences when that book which i intend to entitle pragmatic logic is completed i intend to prepare for the press vol 2 of my minor writings 2 language and cognition which will cover some of my post war papers
