test of a child's ages 12 through 15 years 11 months old ability to identify a picture from among a group of pictures that depicts the stimulus word presented orally by an examiner

unlike any book you've ever read mentored by a millionaire is made up of fifteen mentoring sessions in which you will be mentored in the strategies skills and techniques used by super achievers who have become the world's most successful men and women you will be mentored in these sessions by Steve Scott a man who has not only made millions himself but has helped dozens of others make millions as well

category specific knowledge disorders are among the most intriguing and perplexing syndromes in cognitive neuropsychology the past decade has witnessed increased interest in these disorders due largely to a heightened appreciation of the profound implications that an understanding of concept representation has for such diverse topics as object recognition the organisation of the lexicon and storage of long term memories until recently information about the representation of concepts was limited to findings from patients with brain injury and disease this state of affairs has now changed with the advent and wide spread availability of functional imaging for studying cognition in the normal human brain the purpose of this special issue is to provide a forum for new findings and critical theoretical analyses of existing data from patient and functional brain imaging studies the contributions all from major investigators in the field range from studies of specific object categories such as animals tools fruit and vegetables and faces to the more general domains of number processing social interaction and mechanical knowledge a unifying theme of these papers is the extent to which the findings can be best understood within the context of models that posit an innate domain specific organisation those that appeal to an organisation by sensory and motor based features and properties and those that propose an undifferentiated distributed neural organisation

assesses child's receptive single word vocabulary which is the child's ability to identify a picture from among a group of pictures that depicts the stimulus word presented orally by the examiner

designed for children 2 to 12 years

communication is vital for social participation however communication often takes place under suboptimal conditions this makes communication harder and less reliable leading at worst to social isolation in order to promote participation it is necessary to understand the mechanisms underlying communication in different situations human communication is often speech based either oral or written but may also involve gesture either accompanying speech or in the form of sign language for communication to be achieved a signal generated by one person has to be perceived by another person attended to comprehended and responded to this process may be hindered by adverse conditions including factors that may be internal to the sender e g incomplete or idiosyncratic language production occur during transmission e g background noise or signal processing or be internal to the receiver e g poor grasp of the language or sensory impairment the extent to which these factors interact to generate adverse conditions may differ across the lifespan recent work has shown that successful speech communication under adverse conditions is associated with good cognitive capacity including efficient working memory and executive abilities such as updating and inhibition further frontoparietal networks associated with working memory and executive function have been shown to be activated to a greater degree when it is harder to achieve speech comprehension to date less work has focused on sign language communication under adverse conditions or the role of gestures accompanying speech communication under adverse conditions it has been proposed that the role of working memory in communication under such conditions is to keep fragments of an incomplete signal in mind updating them as appropriate and inhibiting irrelevant information until an adequate match can be achieved with lexical and semantic representations held in long term memory recent models of working memory highlight an episodic buffer whose role is the multimodal integration of information from the senses and long term memory it is likely that the episodic buffer plays a key role in communication under adverse conditions the aim of this research topic is to draw together multiple perspectives on communication under adverse conditions including empirical and theoretical approaches this will facilitate a scientific exchange among individual scientists and groups studying different aspects of communication under adverse conditions and or the role of cognition in communication as such this topic belongs firmly within the field of cognitive hearing science exchange of ideas among scientists with different perspectives on these issues will allow researchers to identify and highlight the way in which different internal and external factors interact to make communication in different modalities more or less successful across the lifespan such exchange is the forerunner of

broader dissemination of results which ultimately may make it possible to take measures to reduce adverse conditions thus facilitating communication such measures might be implemented in relation to the built environment the design of hearing aids and public awareness
