this book is about politics and planning outside of cities where urban political economy and planning theories do not account for the resilience of places that are no longer rural and where local communities work hard to keep from ever becoming urban by examining exurbia as a type of place that is no longer simply rural or only tied to the economies of global resources e.g. mining forestry and agriculture we explore how changing landscapes are planned and designed not to be urban that is to look function and feel different from cities and suburbs in spite of new

home development and real estate speculation the book s authors contend that exurbia is defined by the persistence of rural economies the conservation of rural character and protection of natural ecological systems all of which are critical components of the contentious local politics that seek to limit growth comparative political ecology is used as an organizing concept throughout the book to describe the nature of exurban areas in the u s and australia although exurbs are common to many countries the essays each describe distinctive case studies with each chapter using the key concepts of competing rural capitalisms and uneven environmental management to describe the politics of exurban change this systematic analysis makes the processes of exurban change easier to see and understand based on these case studies seven characteristics of exurban places are identified rural character access local economic change ideologies of nature changes in land management coalition building and land use planning this book will be of interest to those who study planning conservation and land development issues especially in areas of high natural amenity or environmental value there is no political ecology book quite like this neither one solely focused on cases from the developed world in this case the united states and australia nor one that specifically harnesses different case studies from multiple areas to develop a central organizing perspective of landscape change

by drawing on examples from throughout the third world bryant and bailey explain the development and characteristics of environmental problems that plague parts of asia africa and latin america and their political and economic bases

feminist political ecology explores the gendered relations of ecologies economies and politics in communities as diverse as the rubbertappers in the rainforests of brazil to activist groups fighting racism in new york city women are often at the centre of these struggles struggles which concern local knowledge everyday practice rights to resources sustainable development environmental quality and social justice the book bridges the gap between the academic and rural orientation of political ecology and the largely activist and urban focus of environmental justice movements
