insects are a group of abundant and diverse organisms that have successfully adapted to the most challenging conditions on earth the success of insects in adverse environments indicates the advanced defense mechanisms employed by these organisms but they are often targeted by specialized microorganisms viruses bacteria nematodes fungi and parasitoids insects exhibit both humoral and cellular immune responses against pathogens the lack of an adaptive immune system has compelled insects to choose immediate non specific but sophisticated responses that include the production of antimicrobial peptides phenoloxidase apoptosis phagocytosis encapsulation and nodulation in recent decades technological advances have been made in decrypting the molecular and mechanistic basis of insect immunity however there is a need to understand the insect immune responses to single or mixed encounters future challenges include a better understanding of functional cooperation of various endosymbiotic microbes and their role in insect defenses post transcriptional modulation of immune responses regulated by non coding rnas microrna long non coding rnas has become critically important to study by using modern bioinformatics and experimental tools therefore investigating the dynamics of insect immune responses will substantially increase the capacity for confronting harmful agricultural and medical pests furthermore most insect cellular immune activities have been conducted in a laboratory setting therefore confirming the existing knowledge in a natural environment would provide crucial information

knowledge of jawed fish immune systems obtained in the last 15 years has been mostly obtained through the sequencing of genomes of different fish species and from the use of high throughput techniques such as transcriptomic analysis and rna sequencing which has allowed characterization of immune gene responses at the transcriptomic level although these have been important tools for exploring the complexities of the immune responses of fish species the next generation of knowledge requires the use of new tools and methods capable of unveiling the diversity of immune cells and molecules in jawed fish the network of interactions and responses and the mechanisms leading to immune protection against pathogens for more than 10 years many laboratories have been engaged in developing antibodies against key molecules of jawed fish immune systems in several different species because the

lack of sequence conservation of most immune genes makes it impossible to use the large panel of antibodies against mammalian molecules for recognition of fish molecules the numerous genes encoding cytokines and receptors have now been used to make recombinant proteins available allowing studies of the complex network of cytokine and receptor functions central to fish immune responses from many laboratories new and interesting knowledge about immune cells their functions and interactions can be studied with the availability of new tools and methods have begun to provide a clear understanding fish immunity at the protein and cellular levels this research topic gives a comprehensive overview of the current knowledge of jawed fish immune responses with a particular emphasis on structural and functional studies at the protein and cellular levels
