this book is part of an ongoing history of efforts to understand the nature of waking and sleeping states from a biological point of view we believe the recent technological revolutions in anatomy and physiology make the present moment especially propitious for this effort in planning this book we had the choices of producing an edited volume with invited chapter authors or of writing the book ourselves edited volumes offer the opportunity for expression of expertise in each chapter but we felt would not allow the development of our ideas on the potential and actual unity of the field and would not allow the expression of coherence that can be obtained only with one or two voices but which may be quite difficult with a chorus assembled and performing together for the first time unlike musical works there is very little precedent for rehearsals and repeated performances for authors of edited volumes or even for the existence of conductors able to induce a single rhythm and vision of the composition we thus decided on a monograph the primary goal was to communicate the current realities and the future possibilities of unifying basic studies on anatomy and cellular physiology with investigations of the behavioral and physiological events of waking and sleep in keeping with this goal we cross reference the basic cellular physiology in the latter chapters and in the last chapter we take up possible links to relevant clinical phenomenology

the i series applications textbooks strongly emphasize that students learn and master applications skills by being actively engaged by doing these texts have been written with clear error free and unambiguous steps to accomplish tasks that lead to a finished document worksheet or database table the authors made the decision that teaching how to accomplish some task is not enough for complete understanding and mastery prior to introducing steps the authors discuss why the steps students are about to experience are important and what role the steps play in the overall plan for creating a document workbook or database
