information systems research relevant theory and informed practice comprises the edited proceedings of the wg8 2 conference relevant
theory and informed practice looking forward from a 20 year perspective on is research which was sponsored by ifip and held in
manchester england in july 2004 the conference attracted a record number of high quality manuscripts all of which were subjected to a
rigorous reviewing process in which four to eight track chairs associate editors and reviewers thoughtfully scrutinized papers by the

highly regarded as well as the newcomers no person or idea was considered sacrosanct and no paper made it through this process unscathed all authors were asked to revise the accepted papers some more than once thus good papers got better with only 29 percent of the papers accepted these proceedings are significantly more selective than is typical of many conference proceedings this volume is organized in 7 sections with 33 full research papers providing panoramic views and reflections on the information systems discipline followed by papers featuring critical interpretive studies action research theoretical perspectives on research and the methods and politics of development also included are 6 panel descriptions and a new category of bright idea position papers 11 in all wherein main points are summarized in a pithy and provocative fashion

this book constitutes the refereed proceedings of the ifip wg 8.6 international working conference on transfer and diffusion of information technology held in bangalore india in june 2013 the 35 revised full papers presented together with an invited paper 12 short papers and 3 poster papers were carefully reviewed and selected from 65 submissions the full papers are organized in the following topical sections: success and failure studies of it adoption software development it in the public sector and theory and methods

this is the second of two edited volumes from an international group of researchers and specialists which together comprise the edited proceedings of the first international conference on engineering psychology and cognitive ergonomics organized by cranfield college of aeronautics at stratford upon avon england in october 1996 the applications areas include aerospace and other transportation human computer interaction process control and training technology topics addressed include the design of control and display systems human perception error reliability information processing and human perception error reliability information processing and awareness skill acquisition and retention techniques for evaluating human machine systems and the physiological correlates of performance while volume one is more clearly focused on the domain of aviation and ground transportation volume two is concerned with human factors in job and product design the basics of decision making and training with relevance to all industrial domains part one opens with a keynote chapter by ken eason it is followed by part two dealing with learning and training while part three reflects the rapidly growing area of medical ergonomics part four entitled applied cognitive psychology is biased towards human capabilities an understanding of which is central to

sound human engineering decisions part five firmly emphasizes equipment rather than its human operators

written specifically for information systems is and computing students and providing everything they need to know about executing a research project this book is packed with guidance and examples

this volume contains the proceedings of the 6th international conference of the bcs specialist group on information systems methodologies the conference brought together papers on methodology issues related to the development and management of emerging technology based information systems as usual there was a good range of papers addressing the soft and hard aspects of its development and management methodologies for developing and managing emerging technology based information systems will be of interest to practitioners who are engaged in systems development and modifying or aligning existing methodologies to practice

this book is a comprehensive guide to research methodology designed to meet the needs of students academics and professionals in the field of computing and information systems each concept is presented in a clear and understandable manner making it accessible for beginners while providing depth for advanced learners the use of figures and tables throughout the book enhances comprehension enabling readers to grasp complex ideas quickly and effectively the book begins with an introduction to research fundamentals including its purpose design and various approaches subsequent units delve into specialized topics such as internet research literature review techniques data collection methods and hypothesis testing each chapter integrates theoretical explanations with practical examples ensuring a balanced understanding of both concepts and applications special emphasis is placed on quantitative and qualitative data analysis complete with visual aids like charts and graphs to simplify interpretation the book also covers modern research strategies including case studies experiments and action research with practical insights into planning and execution the final sections provide guidance on presenting research through papers posters and vivas alongside essential topics like research ethics and plagiarism with its structured layout and practical focus this book serves as an indispensable resource for anyone pursuing excellence in research

engineering is a new discipline that addresses the pressing need for systematic and tool supported approaches for the development

maintenance and testing of applications engineering builds upon well known and successful software engineering principles and practices adapting them to the special characteristics of applications even more relevant is the enrichment with methods and techniques stemming from related areas like hypertext authoring human computer interaction content management and usability engineering the goal of the 4th international conference on engineering icwe 2004 in line with the previous icwe conferences was to work towards a better understanding of the issues related to application development special attention was paid to emerging trends technologies and future visions to help the academic and industrial communities identify the most challenging tasks for their research and projects following a number of successful workshops on engineering since 1997 at well known conferences such as icse and www the first conference on engineering was held in cadiz spain in 2001 it was followed by icwe 2002 in santa fe argentina and icwe 2003 in oviedo spain in 2004 icwe moved to the center of europe and was held in munich germany from july 26 to 30 icwe 2004 was organized by the institute for informatics of the ludwig maximilians universitat lmu munich the icwe 2004 edition received a total of 204 submissions out of which 25 papers were selected by the program committee as full papers 12 acceptance

information systems development reflections challenges and new directions is the collected proceedings of the 20th international conference on information systems development held in edinburgh scotland august 24 26 2011 it follows in the tradition of previous conferences in the series in exploring the connections between industry research and education these proceedings represent ongoing reflections within the academic community on established information systems topics and emerging concepts approaches and ideas it is hoped that the papers herein contribute towards disseminating research and improving practice

how we can enact meaningful change in computing to meet the urgent need for sustainability and justice the deep entanglement of information technology with our societies has raised hope for a transition to more sustainable and just communities those that phase out fossil fuels distribute public goods fairly allow free access to information and waste less in principle computing should be able to help but in practice we live in a world in which opaque algorithms steer us toward misinformation and unsustainable consumerism insolvent shows why computing's dominant frame of thinking is conceptually insufficient to address our current challenges and why computing continues

to incur societal debts it cannot pay back christoph becker shows how we can reorient design perspectives in computer science to better align with the values of sustainability and justice becker positions the role of information technology and computing in environmental sustainability social justice and the intersection of the two and explains why designing it for just sustainability is both technically and ethically challenging becker goes on to argue that computing could be aided by critical friends disciplines that draw on critical social theory feminist thought and systems thinking to make better sense of its role in society finally becker demonstrates that it is possible to fuse critical perspectives with work in computer science showing new and fruitful directions for computing professionals and researchers to pursue

this book describes some of the most recent advances and examines emerging problems in engineering psychology and cognitive ergonomics bridging the gap between the academic theoreticians who are developing models of human performance and practitioners in the industrial sector responsible for the design development and testing of new equipment and working practices

this book looks at the combination of art creativity and expression through the use and combination of computer science and how technology can be used creatively for self expression using different approaches provided by publisher

stefanie paluch employs multiple qualitative methods to explore the perception of remote services and its impact on customer provider relationships in usa germany and sweden she develops a comprehensive model about customers holistic remote service experience and derives theoretical propositions that reflect main influence factors

design thinking and other agile methods are firmly established frameworks in innovation and project management for teams and many studies deal with their use in companies solo entrepreneurs as the quasi smallest possible unit of a company are seldom in view when applying these ideas their situation also differs significantly from that of larger corporate entities as evidenced for example by the fact that personal challenges can also affect general economic success much more quickly this master thesis used a qualitative method mix of qualitative interviews feedback grids and most importantly practical workshops based on the design based research approach to investigate

the extent to which the use of agile methods is beneficial and meaningful in addressing business cases of solo entrepreneurs
