robert lanza is one of the most respected scientists in the world a us news world report cover story called him a genius and a renegade thinker even likening him to einstein lanza has teamed with bob berman the most widely read astronomer in the world to produce biocentrism a revolutionary new view of the universe every now and then a simple yet radical idea shakes the very foundations of knowledge the startling discovery that the world was not flat challenged and ultimately changed the way people perceived themselves and their relationship with the world for most humans of the 15th century the notion of earth as ball of rock was nonsense the whole of western natural philosophy is undergoing a sea change again increasingly being forced upon us by the experimental findings of quantum theory and at the same time towards doubt and uncertainty in the physical explanations of the universe s genesis and structure biocentrism completes this shift in worldview turning the planet upside down again with the revolutionary view that life creates the universe instead of the other way around in

this paradigm life is not an accidental byproduct of the laws of physics biocentrism takes the reader on a seemingly improbable but ultimately inescapable journey through a foreign universe our own from the viewpoints of an acclaimed biologist and a leading astronomer switching perspective from physics to biology unlocks the cages in which western science has unwittingly managed to confine itself biocentrism will shatter the reader's ideas of life time and space and even death at the same time it will release us from the dull worldview of life being merely the activity of an admixture of carbon and a few other elements it suggests the exhilarating possibility that life is fundamentally immortal the 21st century is predicted to be the century of biology a shift from the previous century dominated by physics it seems fitting then to begin the century by turning the universe outside in and unifying the foundations of science with a simple idea discovered by one of the leading life scientists of our age biocentrism awakens in readers a new sense of possibility and is full of so many shocking new perspectives that the reader will never see reality the same way again

mai come oggi ci troviamo di fronte a un bivio accettare che il mondo che ci circonda precipiti sempre più in basso oppure attivarci e darci da fare per crearne uno migliore la kabbalah e il potere di cambiare ogni cosa ci guida giorno dopo giorno in un percorso di rinnovamento personale per realizzare un cambiamento non solo sul piano individuale ma anche su quello globale prendendo in esame problemi attuali che coinvolgono ambiti quali la politica l'economia l'ambiente e la religione yehuda berg dimostra come tutti noi possiamo contribuire a trasformazioni importanti e positive con uno stile brillante asciutto e spesso irriverente berg ricorre a storie personali aneddoti testimonianze nonché parabole o episodi del passato per aprirci a una nuova consapevolezza esortandoci ad assumere piena responsabilità delle azioni che svolgiamo apocalisse ora o paradiso la scelta è nelle mani di tutti noi cambiamo la nostra mente e cambieremo il mondo

biocentrism shocked the world with a radical rethinking of the nature of reality but that was just the beginning in beyond biocentrism acclaimed biologist robert lanza one of time magazine's 100 most influential people in 2014 and leading astronomer bob berman take the reader on an intellectual thrill ride as they re-examine everything we thought we knew about life death the universe and the nature of reality itself the first step is acknowledging that our existing model of reality is looking increasingly creaky in the face of recent scientific discoveries science tells us with some precision that the universe is 26.8 percent dark matter 68.3 percent dark energy and only 4.9 percent ordinary matter but must confess that it doesn't really know what dark matter is and knows even less about dark energy science is increasingly pointing toward an infinite universe but has no ability to explain what that really means concepts such as time space and even causality are increasingly being demonstrated as meaningless all of science is based on information passing through our consciousness but science hasn't the foggiest idea what consciousness is and it can't explain the linkage between subatomic states and observation by conscious observers science describes life as a random occurrence in a dead universe but has no real understanding of how life began or why the universe appears to be exquisitely designed for the emergence of life the biocentrism theory isn't a rejection of science quite the opposite

biocentrism challenges us to fully accept the implications of the latest scientific findings in fields ranging from plant biology and cosmology to quantum entanglement and consciousness by listening to what the science is telling us it becomes increasingly clear that life and consciousness are fundamental to any true understanding of the universe this forces a fundamental rethinking of everything we thought we knew about life death and our place in the universe

what if life isn't just a part of the universe what if it determines the very structure of the universe itself the theory that blew your mind in biocentrism and beyond biocentrism is back with brand new research revealing the startling truth about our existence what is consciousness why are we here where did it all come from the laws of nature the stars the universe humans have been asking these questions forever but science hasn't succeeded in providing many answers until now in the grand biocentric design robert lanza one of time magazine's 100 most influential people is joined by theoretical physicist matej pavlic and astronomer bob berman to shed light on the big picture that has long eluded philosophers and scientists alike this engaging mind stretching exposition of how the history of physics has led us to biocentrism the idea that life creates reality takes readers on a step by step adventure into the great science breakthroughs of the past centuries from newton to the weirdness of quantum theory culminating in recent revelations that will challenge everything you think you know about our role in the universe this book offers the most complete explanation of the science behind biocentrism to date delving into the origins of the memorable principles introduced in previous books in this series as well as introducing new principles that complete the theory the authors dive deep into topics including consciousness time and the evidence that our observations or even knowledge in our minds can affect how physical objects behave the grand biocentric design is a one of a kind groundbreaking explanation of how the universe works and an exploration of the science behind the astounding fact that time space and reality itself all ultimately depend upon us

il novecento è stato il secolo della fisica le scoperte sull atomo le sue particelle e l architettura del cosmo hanno prodotto la nostra concezione di universo e tutta la tecnologia che plasma la vita quotidiana eppure proprio la fisica non è stata capace e non lo è ancora di rispondere alle antichissime domande dell uomo invocando come risolutiva quella teoria del tutto che ha a lungo inseguito e mai raggiunto che cosa c'era prima del big bang perché l universo sembra costruito perfettamente su misura per l uomo e se chiudiamo gli occhi l universo esiste ancora esistono lo spazio e il tempo che cosa succede dopo la morte biocentrismo accoglie queste domande in una prospettiva inedita e affida alla biologia l onere di far progredire le risposte ciò che percepiamo come realtà non è che un prodotto della coscienza scoperte scientifiche incluse la creatura biologica a modellare il racconto soltanto quando la materia diviene cosciente di sé e comincia a osservare l esistente l universo intero muta la propria natura dallo stato indeterminato di probabilità così come definito dalla teoria quantistica a quello di misteriosa concreta presenza a partire dal fotone dal petalo di una margherita dal vento per arrivare alle nebulose più remote robert lanza uno dei maggiori scienziati viventi noto per le sue ricerche sulle cellule staminali allestisce un originale trattazione scientifica che ha la luce della semplicità e formula una teoria che colma un vuoto oltraggioso sia nei confronti della religione che della scienza una teoria che ha la necessaria e smisurata ambizione di porre la domanda che cosa è l universo

che cosa accadrà quando moriremo dove eravamo prima di essere messi al mondo la realtà che percepiamo con i nostri sensi è davvero così come ci appare dagli albori della civiltà gli esseri umani continuano a porsi le stesse domande e a meditare sulle medesime ossessioni gli antichi cercarono risposte nel cielo leggendo il proprio destino nell occhio degli dèi o come iniziarono a fare alcuni filosofi greci affidandosi all argomentazione logica per motivare le sventure di ogni giorno fu aristarco quasi duemila anni prima di galileo a mettere in discussione la vecchia credenza che ogni cosa nel cielo ruotasse attorno alla terra e aristotele aveva già compreso anticipando di secoli la fisica quantistica che il tempo e lo spazio non sono dimensioni reali ma soltanto percezioni dell essere umano eppure anche dopo le conquiste scientifiche e

tecnologiche dell'età moderna e contemporanea nessuno sembra ancora in grado di rispondere ai nostri più elementari interrogativi qualcosa continua a sfuggirci mentre le domande si moltiplicano diventando sempre più ardite e il nostro sguardo capace ormai di sondare le più piccole particelle della materia e di intravedere punti assai remoti nello spazio deve fare i conti con i limiti dei tradizionali paradigmi scientifici dopo la rivoluzione culturale messa in atto dal precedente biocentrismo robert lanza e bob berman mirano ancora più in alto oltre il biocentrismo entra con lo stupore di ogni scoperta e il rigore della biologia e dell'astrofisica in uno spazio ancora non del tutto esplorato partendo dalle esperienze più comuni la percezione dei colori di un tramonto la sensazione delle nostre dita a contatto con una fiamma la capacità di vedere qualcosa anche con gli occhi chiusi gli autori si propongono di dimostrare come la realtà non esista al di fuori di noi ma accada sempre e soltanto nella nostra mente un'intuizione antica che trova terreno fertile in alcune delle più recenti e affascinanti ipotesi scientifiche guida le ricerche biocentriche di questo libro "L'essere umano a scrivere attraverso la sua coscienza la straordinaria storia dell'universo"

per questo è la coscienza per questo estamos aquí de donde viene todo las leyes de la naturaleza las estrellas el universo los seres humanos se han hecho estas preguntas desde siempre y la ciencia no ha sido capaz de responder a muchas de ellas hasta ahora en el gran diseño biocéntrico robert lanza una de las 100 personas más influyentes de nuestros días según la revista time estudia el funcionamiento del universo con la colaboración del físico teórico matej pavšic y del astrónomo bob berman para aclarar los enigmas que desde hace tanto tiempo la filosofía y la ciencia han intentado en vano descifrar estas tres mentes brillantes penetran en el origen de los memorables principios presentados en los dos libros anteriores e incorporan además nuevos hallazgos que completan la teoría por un apasionante viaje en el tiempo a cada uno de los grandes avances científicos de los últimos siglos desde newton hasta las rarezas de la teoría cuántica que culmina en una serie de revelaciones anonadantes que harán tambalearse todo lo que hasta ahora se creía sobre el lugar del ser humano en el universo
