explores ways that the tragedy of the commons can be avoided by people who use common property resources

this volume presents a unique interdisciplinary assembly of thoughts in which agricultural scientists fisheries scientists forestry experts alternative medicine systems experts environmental and resource economists among others have addressed their tasks focussing on institutions as a crosscutting theme in their writings on sustainable use of common pool resources

this book analyses the drivers of specific common pool resource problems particularly in fisheries and forestry examining the way in which private and public regulation have intervened to fight the common pool resource problem by contributing to the establishment and maintenance of property rights it focuses on

the various forms of regulation that have been put in place to protect fisheries and forestry over the past decades both from a theoretical as well as from a policy perspective comparing the concrete interaction of legal and policy instruments in eight separate jurisdictions

a compilation of current articles from such sources as world watch audobon the atlantic monthly and scientific american these selections explore the global environment the world s population energy the biosphere natural resources and pollution includes a listing of related sites and access to the student support site dushkin online dushkin com online

one of the many ways in which we attempt to study resource use and conservation is to define natural resources as common pool resources yet in a broad sense we can understand nature more generally as a common pool resource with which we maintain a special relationship this definition incorporates several legal behavioral and ecological concepts that seek to capture the intricate and complex place where nature and the governance of nature collide once we apply the common pool resource definition to nature we commit to viewing nature through five distinct and specific lenses that are embedded in the common pool resource framework this chapter explores these commitments in an effort to establish a foundation for related research on how these common pool resource specific lenses may influence the management of nature the chapter begins with a short background on common pool resources and the understanding of them in the legal literature the chapter then turns to five conceptual commitments we make by labeling nature as a common pool resource an exploration of the commitments reveals that they have both intended and unintended consequences on the way we view nature those consequences in turn have both positive and negative implications for the management of nature further regardless of whether the commitments help facilitate positive or negative approaches to nature management each commitment places limiting and potentially harmful constraints on the broader perspective with which we should view nature the chapter concludes by raising the question of whether this limited perspective fully considers pertinent characteristics inherent in nature and whether we should think more broadly when defining nature

this work argues that current approaches to pollution not only fail to deal with the challenge of existing and novel types of pollution but also fail to take into account our changing understanding of its international scale and effects the authors look at the subject in an international context

increasing recognition of the interaction between poverty and resources and environmental degradation has led to interventions that put more and more emphasis on working with local communities to improve the management of the environment and natural resources identifying and overcoming the barriers to women s and men s full participation in the management of resources is a necessary first step towards the ultimate goals of poverty alleviation and sustainable

development understanding the environmental roles and responsibilities of women and men is critical to sustainable resource management practices the chapters in the book reflect experiences with mainstreaming gender and women s issues in natural resources management the introductory paper focusing on the history and current status of gender and natural resources management is followed by five further papers presenting cases of this approach written by experts and practitioners from different parts of the world the papers examine diverse natural resources from different perspectives ranging from the household and community level to national and regional policy they examine the security of women s rights to common property resources and land in west africa mainstreaming gender in water policy and institutions in gujarat india gender responsive planning in wetland development in uganda empowering women in managing natural resources in mountain areas of the hindu kush himalayas of pakistan and the development of gender policies for environmental ministries in mesoamerica the papers are complemented by an extensive annotated bibliography including references to books journals and electronic documents and a list of relevant resources together these resources provide a global overview of the work in this field published in association with kit publishers

this 5th edition contains boxed examples that highlight special topics in every chapter in addition there are three new chapters sustainable development concepts that lie behind economics valuation and methods of valuing the environment
