based on a new classification of algorithm design techniques and a clear delineation of analysis methods introduction to the design and analysis of algorithms presents the subject in a truly innovative manner written in a student friendly style the book encourages broad problem solving skills while thoroughly covering the material required in an introductory algorithms course the author emphasizes conceptual understanding before the introduction of the formal treatment of each technique popular puzzles are used to motivate students interest and strengthen their skills in algorithmic problem solving other learning enhancement features include chapter summaries hints to the exercises and a solution manual

the alenex workshop provides a forum for the presentation of original research in the implementation and experimental evaluation of algorithms and data structures this volume collects extended versions of the 12 papers that were selected for presentation

for decades the market asset and income approaches to business valuation have taken center stage in the assessment of the firm this book brings to light an expanded valuation toolkit consisting of nine well defined valuation principles hailing from the fields of economics finance accounting taxation and management it ultimately argues that the value functional approach to business valuation avoids most of the shortcomings of its competitors and more correctly matches the actual motivations and information set held by stakeholders much of what we know about corporate finance and mathematical finance derives from a narrow subset of firms publicly traded corporations the value functional approach can be readily applied to both large firms and companies that do not issue publicly traded stocks and bonds

cannot borrow without constraints and often rely upon entrepreneurs to both finance and manage their operations with historical side notes from an international set of sources and real world exemplars that run throughout the text this book is a future facing resource for scholars in economics and finance as well as the academically minded valuation practitioner
