in the current age of information explosion newly invented technological sensors and software are now tightly integrated with our everyday lives many sensor processing algorithms have incorporated some forms of computational intelligence as part of their core framework in problem solving these algorithms have the capacity to generalize and discover knowledge for themselves and learn new information whenever unseen data are captured the primary aim of sensor processing is to develop techniques to interpret understand and act on information contained in the data the interest of this book is in developing intelligent signal processing in order to pave the way for smart sensors this involves mathematical advancement of nonlinear signal processing theory and its applications that extend far beyond traditional techniques it bridges the boundary between theory and application developing novel theoretically inspired methodologies targeting both longstanding and emergent signal processing applications the topic ranges from phishing detection to integration of terrestrial laser scanning and from fault diagnosis to bio inspiring filtering the book will appeal to established practitioners along with researchers and students in the emerging field of smart sensors processing

in this book a novel optimization method inspired by a paradigm from nature is introduced the chemical reactions are used as a paradigm to propose an optimization method that simulates these natural processes the proposed algorithm is described in detail and then a set of typical complex benchmark functions is used to evaluate the performance of the algorithm simulation results show that the proposed optimization algorithm can outperform other methods in a set of benchmark functions this chemical reaction optimization paradigm is also applied to solve the tracking problem for the dynamic model of a unicycle mobile robot by integrating a kinematic and a torque controller based on fuzzy logic theory computer simulations are presented confirming

that this optimization paradigm is able to outperform other optimization techniques applied to this particular robot application
