an international review of road safety engineering this study illustrates the practices procedures used in the identification of hazardous sites and the development of road traffic countermeasures it identifies the sources of accident problems and factors of human behaviour

contains summaries of the knowledge regarding the effects of 128 road safety measures this title covers various areas of road safety including traffic control vehicle inspection driver training publicity campaigns police enforcement and general policy instruments it also covers topics such as post accident care and speed cameras

this report takes stock of recent developments and initiatives to meet increasingly ambitious road safety targets and constitutes a major international review of progress in developing safe system approaches now adopted in a small number of countries

many books focus on individual differences and how those relate to traffic safety such as accident proneness gender differences age alcohol and the effects of drugs others focus on the safety effects regarding the vehicle such as airbags anti lock brakes navigation systems intelligent cruise control and other new gadgets coming to the vehicle even though these topics are undoubtedly important for traffic safety this book takes a unique approach as it focuses solely on the road environment designing safe road systems provides the background for those who want to know more about the effects of road design on driving behaviour it uses a systems approach to allow a better understanding of why and in what circumstances drivers may commit errors this understanding will ultimately lead to road systems that prevent fatal errors from occurring the book contains

an overview of the current models and theories about human performance and human behaviour in traffic that are relevant for all those involved in designing safe road systems the central theme of this book is how design principles can reduce the probability of an error while driving the authors demonstrate how knowledge of human factors helps a road authority to better understand how road users behave they argue that in many cases the design of the environment can be further adjusted to human capabilities and that safety should be considered a system property to be built into the road system

in recognition of the importance of road safety as a major health issue the world health organization has declared 2011 2021 the decade of safety action several countries in europe north america and asia have been successful in reducing fatalities and injuries due to road traffic crashes however many low income countries continue to experience high rates of traffic fatalities and injuries transport planning and traffic safety making cities roads and vehicles safer offers a source book for road safety training courses as well as an introductory textbook for graduate level courses on road safety taught in engineering institutes it brings together the international experiences and lessons learned from countries which have been successful in reducing traffic crashes and their applicability in low income countries the content is based on lectures delivered during an international course on transportation planning and traffic safety sponsored annually by the transportation research and injury prevention programme tripp at the indian institute of technology delhi the book is interdisciplinary and aimed at professionals traffic and road engineers vehicle designers law enforcers and transport planners the authors examine trends in performance of oecd countries and highlight the public health and systems approach of traffic safety with the vulnerable road user in focus topics include land use transportation planning mobility and safety safety education and legislation accident analysis road safety research human tolerance to injury vehicle design safety in construction zones safety in urban areas traffic calming public transportation safety laws

and policies and pre hospital care of the injured

road safety is an important sustainable development goal yet relatively underappreciated and greatly underfunded every year more than 1.2 million people are killed globally while another 50 million are injured as a consequence of road traffic accidents approximately 90% of all road accidents now happen in low and middle income countries recognizing the need to support member states in urgently and effectively addressing road safety challenges three of the United Nations regional commissions initiated the project strengthening the national road safety management capacities of selected developing countries and countries with economies in transition the project aimed to assist four countries to enhance their national road safety management capacities and to effectively address and improve their national road safety records the project was implemented in Albania, Dominican Republic, Georgia and Viet Nam the road safety performance reviews assessed the current road safety situation helped the governments concerned to identify the most critical road safety issues and recommended actions to be taken based on the identified priority needs capacity building seminars and workshops for national road safety stakeholders were organized additionally the project raised public awareness on road safety issues and sensitized national experts as well as the public and non governmental sectors to the need to set ambitious road safety targets and implement specific measures to improve road safety

A choice road safety this book is basically about the road safety rules and why it is important to implement it in your daily life like any other activities we do I work for road safety for 6 months then I only work but after meeting an accident I get to know that one moment in which you get to know the value of your precious life or everyone's life importance it was a hard collision and unforgettable one the perspective behind writing this book is to aware all about the road safety rules and regulation while driving on road

why is it important to follow these rules not only to escape from being penalized but to be safe and for others sake of safety i read many books on road safety but we don t have a proper assistance book on road safety from there a thought strikes into my mind to write a book on road safety with complete assistance knowledge to all the road users and soon coming years it will be teach in schools and colleges as subject matter to make the youth aware of it well before riding on road i write this book to benefit the youth with my small contribution to let them know about the road safety rules and regulation while driving on road one thing always triggers my mind is only to be aware and attentive on road do consider yourself precious and no one can be you except you and to let others know the value of their precious life make them learn about the road safety in such a way so that it can get engrossed into people s blood and it is the only priority while driving to follow the rules road users should maintain courtesy on road least important one is everyone should know their vehicle in better way and its essential requirements it is all about vehicle and road safety rules

road space is shared by multiple vehicles i e cars taxis buses trucks motorcycles and mopeds pedestrians animals and many other categories of travellers easy availability of motor vehicles and advancements in their technology has made road travel easy on the other hand this has also resulted in a significant increase in the number of motor vehicle related injuries road traffic related injuries remain an important public health problem globally it has been estimated that approximately 1 25 million people succumb to road traffic injuries annually worldwide and between 20 and 50 million people sustain non fatal injuries it is a cause of great concern that 59 of the severely injured population is young adults aged between the age of 15 and 44 years at present globally road traffic injuries are ranked as the eighth leading cause of mortality and if the current trends continues it is expected to be the seventh leading cause of mortality at the global level by 2030 road traffic safety is one of the most significant concerns of the united nations and a 5 tiered

approach has been proposed to combat traffic accidents and fatalities this includes improvements in health care services focusing on injury care road safety management road network safety vehicular safety and implementation of road safety legislation changes in practices like speed control use of seatbelts and helmets respecting traffic signals and signs avoiding drunken driving or use of drugs following traffic rules lane driving and avoiding mobile phones while driving are some of the behavioural changes that can bring about a significant reduction in the number of road traffic related injuries the present book consists of fifteen chapters related to various aspects concerning road traffic and safety including epidemiology of road traffic injuries occupant protection and safety devices risk factors a manual of safety measures road safety in hilly terrain and conflict zones prevention of head injuries the role of alcohol and bicycle related injuries the authors hope that the book shall help the readers to get an overview of various aspects related to global road traffic and safety

this report presents the status of road safety in the who european region and provides a baseline assessment of how far 49 countries have come in implementing the recommendations of the world report on road traffic injury prevention in the region road crashes result annually in 120 000 deaths 2 4 million injuries and a great economic burden which may be up to 3 of a country s gross domestic product road traffic injuries are the leading cause of death among people 5 29 years old vulnerable road users such as pedestrians cyclists and users of motorized two wheelers constitute 39 of all road traffic injury fatalities with pedestrians being more at risk in the eastern part of the region countries differ greatly in mortality rates for road traffic injuries the average in low and middle income countries is twice that in high income countries countries policy responses in providing road safety for their citizens have differed this report proposes the following areas of action narrow the gap between countries with the lowest and highest mortality rates provide better protection for vulnerable road users develop a well resourced
