the graphical user interface gui as the most prevailing type of user interface ui in today s interactive applications restricts the interaction with a computer to the visual modality and is therefore not suited for some users e g with limited literacy or typing skills in some circumstances e g while moving around with their hands or eyes busy or when the environment is constrained e g the keyboard and the mouse are not available in order to go beyond the gui constraints the multimodal mm uis appear as paradigm that provide users with great expressive power naturalness and flexibility in this thesis we argue that developing mm uis combining graphical and vocal modalities is an activity that could benefit from the application of a methodology which is composed of a set of models a method manipulating these models and the tools implementing the method therefore we define a design space based method that is supported by model to model colored transformations in order to obtain mm uis of information systems the design space is composed of explicitly defined design options that clarify the development process in a structured way in order to require less design effort the feasibility of the methodology is demonstrated through three case studies with different levels of complexity and coverage in addition an empirical study is conducted with end users in order to measure the relative usability level provided by different design decisions

space planning involves much more than sketching a preliminary floor plan a designer must take a client s programming needs into account and must also consider how other factors such as building codes and environmental factors affect a spatial composition space planning basics now in its third edition offers a highly visual step by step approach to developing preliminary floor plans for commercial spaces the book provides tools for visualizing space and walks the

designer through other considerations such as building code requirements and environmental control needs specific programming techniques covered include matrices bubble diagrams cad templates block plans and more new to this edition are coverage of the basics of stair design an essential aspect for planning spaces

as society rapidly changes so too does our relationship with design and the spaces of the designed world meanings of designed spaces is a collection of articles by and interviews with renowned design academics and professionals exploring how people make meaning using design today and how designed space both shapes and is shaped by technology business ethics culture sustainability and society questions posed include how does designing our world provide meaning in our lives how is this meaning constructed what is design research within this framework how do interiors influence our social cultural and psychological ways of being how is the designer s role evolving in relationship to other stakeholders what are possible ways we can understand and respond to the social political ethical and cultural issues we face the book s subject matter moves from the theoretical to the practical and includes at times contradictory viewpoints providing a springboard for conversation and debate

the study of human body measurements on a comparative basis is known as anthropometrics its applicability to the

design process is seen in the physical fit or interface between the human body and the various components of interior space human dimension and interior space is the first major anthropometrically based reference book of design standards for use by all those involved with the physical planning and detailing of interiors including interior designers architects furniture designers builders industrial designers and students of design the use of anthropometric data although no substitute for good design or sound professional judgment should be viewed as one of the many tools required in the design process this comprehensive overview of anthropometrics consists of three parts the first part deals with the theory and application of anthropometrics and includes a special section dealing with physically disabled and elderly people it provides the designer with the fundamentals of anthropometrics and a basic understanding of how interior design standards are established the second part contains easy to read illustrated anthropometric tables which provide the most current data available on human body size organized by age and percentile groupings also included is data relative to the range of joint motion and body sizes of children the third part contains hundreds of dimensioned drawings illustrating in plan and section the proper anthropometrically based relationship between user and space the types of spaces range from residential and commercial to recreational and institutional and all dimensions include metric conversions in the epilogue the authors challenge the interior design profession the building industry and the furniture manufacturer to seriously explore the problem of adjustability in design they expose the fallacy of designing to accommodate the so called average man who in fact does not exist using government data including studies prepared by dr howard stoudt dr albert damon and dr ross mcfarland formerly of the harvard school of public health and jean roberts of the u s public health service panero and zelnik have devised a system of interior design reference standards easily understood through a series of charts and situation drawings with human dimension and interior space these standards are now accessible to all designers of interior environments
