after an introductory chapter concerned with the history of force free magnetic fields and the relation of such fields to hydrodynamics and astrophysics the book examines the limits imposed by the virial theorem for finite force free configurations various techniques are then used to find solutions to the field equations the fact that the field lines corresponding to these solutions have the common feature of being twisted and may be knotted motivates a discussion of field line topology and the concept of helicity the topics of field topology helicity and magnetic energy in multiply connected domains make the book of interest to a rather wide audience applications to solar prominence models type ii superconductors and force reduced magnets

are also discussed the book contains many figures and a wealth of material not readily available elsewhere

these lecture notes contain the material relative to the courses given at the cime summer school held in cetraro italy from august 29 to september 3 2011 the topic was hamilton jacobi equations approximations numerical analysis and applications the courses dealt mostly with the following subjects first order and second order hamilton jacobi bellman equations properties of viscosity solutions asymptotic behaviors mean field games approximation and numerical methods idempotent analysis the content of the courses ranged from an introduction to viscosity solutions to quite advanced topics at the cutting edge of research in the field we believe that they opened perspectives on new and delicate issues these lecture notes contain four contributions by yves achdou finite difference methods for mean field games guy barles an introduction to the theory of viscosity solutions for first order hamilton jacobi equations and applications hitoshi ishii a short introduction to viscosity solutions and the large time behavior of solutions of hamilton jacobi equations and grigory litvinov idempotent tropical analysis the hamilton jacobi and bellman equations
