Samuelson's text was first published in 1948 and it immediately became the authority for the principles of economics courses. The book continues to be the standard bearer for principles courses and this revision continues to be a clear, accurate, and interesting introduction to modern economics. Principles by Bill Nordhaus is now the primary author of this text and he has revised the book to be as current and relevant as ever.

Setting the standard for principles of economics texts, this work presents an introduction to economics.

Takes a look at contemporary economic analysis and presents a view of the state of economics.

A theoretical framework aiming to facilitate study of development economics, the author presents his theory in three sections: how advanced nations developed, a proposed third dimension in addition to labour and capital, and why capital accumulation is unnecessary, even potentially harmful.

From a Nobel prize winning pioneer in environmental economics, an innovative account of how and why green thinking could cure many of the world's most serious problems. From global warming to pandemics, solving the world's biggest problems from climate catastrophe and pandemics to wildfires and corporate malfeasance requires more than anything else coming up with new ways to manage the powerful interactions that surround us. For carbon emissions and other environmental damage, this means ensuring that those responsible pay their full costs rather than continuing to pass them along to others, including future generations. In the spirit of green, Nobel prize winning economist William Nordhaus describes a new way of green thinking that would help us overcome our biggest challenges without sacrificing economic prosperity. In large part by accounting for the spillover costs of economic collisions in a discussion that ranges from the history of the environmental movement to the Green New Deal, Nordhaus explains how the spirit of green thinking provides a compelling and hopeful new perspective on modern life. At the heart of green thinking is a recognition that the globalized world is shaped not by isolated individuals but rather by innumerable interactions inside and outside the economy. He shows how rethinking economic efficiency, sustainability, politics, profits, taxes, individual ethics, corporate social responsibility, finance, and more would improve the effectiveness and equity of our society, and he offers specific solutions on how to price carbon, how to pursue low carbon technologies, how to design an efficient tax system, and how to foster international cooperation through climate clubs. The result is a groundbreaking new vision of how we can have our environment and our economy too.

professor william nordhaus was honored with a nobel prize in economics for his lifetime contributions to research and policy on climate change and macroeconomics this book contains a collection of essays written by eleven leading climate change economists describing precisely how professor nordhaus changed climate change economics the essays highlight the major contributions that professor nordhaus has made to understanding climate change the book also discusses the important contributions professor nordhaus has made to develop effective policies to manage greenhouse gases both now and far into the future several authors also thank professor nordhaus for the influence he has had on the trajectory of their own careers finally the essays press forward and discuss how the entire field continues to work on perfecting both climate change economics and policy
