this is the first systematic probing into perhaps the most puzzling but least discussed fact of cultural history the birth of science cultural history abounds in parallel achievements but it happened only once between 1250 and 1650 that rudimentary science turned into a self sustaining enterprise such a singular process can hardly be without a lesson the grasp of which might be of crucial importance for the future of mankind to unfold this lesson the author stanley I jaki distinguished university professor at seton hall university new jersey and an internationally renowned historian and philosopher of science first gives a detailed analysis of ancient hindu chinese maya egyptian babylonian and greek cultures all of which especially the greek could boast a valuable start in science yet in all of them science suffered a stillbirth they all failed to muster up a sufficient measure faith in progress confidence in the rationality of the universe appreciation of the quantitative method and a depersonalized view of the process of motion all qualities which are the main features of the scientific quest because the koran overemphasized the will of the creator muslim scholars fell prey to a mistrust in the validity of rational laws and as a result science came to a standstill among the arabs as well quite different was the case in the christian medieval west where the biblical faith in the creator permeated for the first time a whole culture and effectively produced the qualities described above the ultimate result was the rise of classical physics such is the main theme of a highly original book in which an astonishing wealth of information is marshalled to unfold as the author states the ultimate consequences of some basic presuppositions the work is a classic effort of synthesis full of drama that vibrates through the long history of science publisher description
