The American Anti-Vivisection Society (AAVS) petitioned the National Institutes of Health (NIH) on April 23, 1997 to prohibit the use of animals in the production of mAb. On September 18, 1997 NIH declined to prohibit the use of mice in mAb production stating that the ascites method of mAb production is scientifically appropriate for some research projects and cannot be replaced. On March 26, 1998 AAVS submitted a second petition stating that NIH failed to provide valid scientific reasons for not supporting a proposed ban. The office of the NIH director asked the National Research Council to conduct a study of methods of producing mAb in response to that request. The research council appointed the Committee on Methods of Producing Monoclonal Antibodies to act on behalf of the Institute for Laboratory Animal Research of the Commission on Life Sciences to conduct the study. The 11 expert members of the committee had extensive experience in biomedical research laboratory animal medicine animal welfare pain research and patient advocacy. Appendix B the committee was asked to determine whether there was a scientific necessity for the mouse ascites

method if so whether the method caused pain or distress and if so what could be done to minimize the pain or distress the committee was also asked to comment on available in vitro methods to suggest what acceptable scientific rationale if any there was for using the mouse ascites method and to identify regulatory requirements for the continued use of the mouse ascites method the committee held an open data gathering meeting during which its members summarized data bearing on those questions a 1 day workshop appendix a was attended by 34 participants 14 of whom made formal presentations a second meeting was held to finalize the report the present report was written on the basis of information in the literature and information presented at the meeting and the workshop

this revision aims to address changes that have taken effect since the publication of the second edition the most significant change has been in the attitude of industry to concurrent engineering in 1987 mostly lip service was paid to it today it has become general practice in most competitive corporations in the second edition the author discussed this as the manufacturing system in the third edition it becomes the focal point concurrent engineering involves the whole product realization process including product concept performance criteria mechanical design and analysis materials selection process planning and modeling production control automation assembly management and others an introductory text cannot possibly cover all of these topics hence the emphasis of the third edition remains on the physical principles and the application of these principles to processes the major difference relative to the second edition will be the emphasis on interactions between process and design capabilities and limitations of processes will be highlighted to show what they mean in terms of design possibilities and design modifications will be suggested for ease of manufacture impact on the environment and possibilities for recycling will be woven into the entire text
