professional burnout is an epidemic in america approximately half of physicians and nurses are
affected and at risk for themselves and their patients much has been written about professional
burnout the term was originally coined in the 1970s by american psychologist herbert
freudenberger to describe the consequences of severe stress and high ideals experienced by
people working in helping professions since then many books have been written to address this
looming national public health crisis but unfortunately there has been much less written from a
solution standpoint getting to the root cause of why this is occurring now more than ever the
resilient healthcare organization engages readers focusing on physicians and healthcare
professionals and their experiences and how they overcame a loss of enthusiasm for work
feelings of cynicism and a low sense of personal accomplishment the feelings of emotional
exhaustion are characterized by depersonalization and perceived ineffectiveness these are the
cardinal features that define burnout and affect almost 50 of physicians and 30 70 of nurses
this book addresses why burnout is viewed as a threat and how it can be fought the author
discusses the contributing factors and solutions at the health system and societal level
additionally this book explores the current and future etiology and impacts on physicians and
healthcare professionals with a significant emphasis on solutions at both the individual level
and the system level contributors patricia s normand md bruce flareau md kathleen ferket msn

vulnerability and resilience are concepts that have long been treated as individual and contradicting topics in recent times we have seen that vulnerabilities and resilience can go hand in hand and that vulnerabilities cannot be conceptualized only in simple terms because intersectionality must be considered as well as social organizational and systemic aspects and processes one example is that women are more vulnerable higher values in nearly all stress related measures in the covid 19 pandemic this finding has to be analyzed from an intersectional perspective because socio economic factors cultural factors exposure to covid 19 and the type of occupation e g healthcare sector frontline workers play an important role in how vulnerable or resilient women can be in a given society the large number of studies on covid 19 vulnerabilities makes it necessary to take a closer look at the resilience factors that often go hand in hand with potential vulnerabilities as we see in the literature about pandemics in general and covid 19 there are some individual organizational and systemic vulnerabilities that can be found in all pandemics from that we can assume that there will be resilience factors within the same concepts that may buffer vulnerabilities
