This is a very welcome book which makes a contribution both to the burgeoning field of Scots in the empire and to Atlantic history. A thoroughly researched study based mainly on original sources. *tm devine* Sir William Fraser, professor of Scottish history and palaeography and director of the Scottish Centre of Diaspora Studies, University of Edinburgh. In the series *Perspectives on Scottish Studies of the Long Eighteenth Century*, series editor Andrew Hook. The long eighteenth century in Scotland is increasingly recognized as a period of outstanding cultural achievement. In these years both the Scottish Enlightenment and Scottish Romanticism made lasting contributions to Western intellectual and cultural life. This series is designed to further our understanding of this crucial era in a range of ways: by reprinting less familiar but important works by writers in the period itself; by producing new editions of key out-of-print books by modern scholars; and by publishing new research and criticism by contemporary scholars.

The volume investigates how the British, French, German and Dutch empires influenced or were influenced by scientific exploration as a means Western culture used to gain entry to the non-Western world from around 1800 to the middle of the 20th century. The transnational perspective aids an understanding and comparison of the sciences as an instrument which the colonial powers employed to gain economic advantage and political control. The essays pay tribute to the metropolitan centre and colonial periphery viewpoints and to the different ways in which imperial expansion occurred. Science had specific meanings in the specific historical realities of European colonialism. The European case studies present similarities and differences in their imperial systems and in the way in which science was used in relation to the level at which they interacted intellectually with the indigenous populations.
