the book aims at presenting technical and financial features of life insurance non life insurance pension plans
the book has been planned assuming non actuarial readers as its natural target namely advanced undergraduate and graduate students in economics business and finance professionals and technicians operating in insurance and pension areas whose job may regard investments risk analysis financial reporting etc and hence implies a communication with actuarial professionals and managers given the assumed target
the book focuses on technical and financial aspects of insurance however avoiding the use of complex mathematical tools in this sense the book can be placed at some midpoint of the existing literature part of which adopts more formal approaches to insurance problems implying the use of non elementary mathematics whereas another part addresses practical questions totally avoiding even simple mathematical tools which in our opinion can conversely provide effective tools for presenting technical and financial features of the insurance business
