this work represents the account of a nato advanced research workshop on thin film growth techniques for low dimensional

structures held at the university of sussex brighton england from 15 19 sept 1986 the objective of the workshop was to review the problems of the growth and characterisation of thin semiconductor and metal layers recent advances in deposition techniques have made it possible to design new material which is based on ultra thin layers and this is now posing challenges for scientists technologists and engineers in the assessment and utilisation of such new material molecular beam epitaxy mbe has become well established as a method for growing thin single crystal layers of semiconductors until recently mbe was confined to the growth of iii v compounds and alloys but now it is being used for group iv semiconductors and ii vi compounds examples of such work are given in this volume mbe has one major advantage over other crystal growth techniques in that the structure of the growing layer can be continuously monitored using reflection high energy electron diffraction rheed this technique has offered a rare bonus in that the time dependent intensity variations of rheed can be used to determine growth rates and alloy composition rather precisely indeed a great deal of new information about the kinetics of crystal growth from the vapour phase is beginning to emerge

once patronized primarily by the counterculture and the health food establishment the organic food industry today is a multi billion dollar business driven by ever growing consumer demand for safe food and greater public awareness of ecological issues assumed by many to be a recent phenomenon that industry owes much to agricultural innovations that go back to the dust bowl era this book explores the roots and branches of alternative agricultural ideas in twentieth century america showing how ecological thought has challenged and changed agricultural theory practice and policy from the 1930s to the present it introduces us to the people and institutions who forged alternatives to industrialized agriculture through a deep concern for the enduring fertility of the soil a passionate commitment to human health and a strong advocacy of economic justice for farmers randal beeman and james pritchard show that agricultural issues were central to the rise of the environmental movement in the united states as family farms failed during the depression a new kind of agriculture was championed based on the holistic approach taught by the emerging science of

ecology ecology influenced the permanent agriculture movement that advocated such radical concepts as long term land use planning comprehensive soil conservation and organic farming then in the 1970s sustainable agriculture combined many of these ideas with new concerns about misguided technology and an over consumptive culture to preach a more sensible approach to farming in chronicling the overlooked history of alternative agriculture a green and permanent land records the significant contributions of individuals like rex tugwell hugh bennett louis bromfield edward faulkner russell and kate lord scott and helen nearing robert rodale wes jackson and groups like friends of the land and the practical farmers of iowa and by demonstrating how agriculture also remains central to the public interest especially in the face of climatic crises genetically altered crops and questionable uses of pesticides this book puts these issues in historical perspective and offers readers considerable food for thought
