psychophysical theory exists in two distinct forms one ascribes the explanation of phenomena and empirical laws to sensory processes context effects arising through the use of particular methods are an unwanted nuisance whose influence must be eliminated so that one isolates the true sensory scale the other considers psychophysics only in terms of cognitive variables such as the judgment strategies induced by instructions and response biases sensory factors play a minor role in cognitive approaches this work admits the validity of both forms of theory by arguing that the same empirical phenomena should be conceptualized in two alternative apparently contradictory ways this acceptance of opposites is necessary because some empirical phenomena are best explained in terms of sensory processes while others are best ascribed to central causes the complementarity theory stresses the mutually completing nature of two distinct models the first assigns importance to populations of sensory neurons acting in the aggregate and is formulated to deal with sensory effects the second assigns importance to judgment uncertainty and to the subject strategies induced by experimental procedures this model is formulated to explain context effects throughout the text the exposition is interlaced with mathematics graphs and computer simulations designed to reveal the complementary nature of psychophysical explanations

document from the year 2019 in the subject law european and international law intellectual properties tufts university language english abstract the focus of this book is the analysis of male sexual crimes in international criminal justice the first part of the present research work is focused on the legal analysis of the relevant articles of international criminal court s statute regarding the obligation of cooperation between states for the punishment of serious crimes against humanity and war judicial development

starting with the ad hoc tribunals and arriving at causes at various stages of proceedings still ongoing in the international criminal court. The ICC opens doctrinal and comparative national debates especially in the case of lacking states cooperation seeking to elaborate specific topics such as the obligation of states cooperation requests for assistance during preliminary investigations during inquiries and confidential information court assistance to states parties participating in the statute suspending the execution of a request the role of the prosecutor and the non assistance of some states impede the development and operation of international criminal justice. The second part has attempted to analyze sexual crimes and especially the crime of male rape. The jurisprudence of international criminal tribunals and the ICC have tried to qualify rape either as a crime of genocide in the form of serious and physical injuries even if not necessarily permanent. Let's look at art 6 of the Rome Statute or as a crime against humanity where there are elements of context and above all material elements that emerge from the definitions given by the ad hoc tribunals and the elements of crimes or even as a war crime in case it is implemented to that of sexual violence according to a gender specific relationship. To specify judges through the jurisprudence have included in this context any conduct of a sexual type of aggression to human dignity that does not consist in an act of penetration and that does not involve physical contact. The contrasts are always open due to the lack of dealing with a particular crime and difficult to prove it or testify before an international court. The indication on the level of gravity of the crime is necessary for the relevance of sexual violence and rape as crimes against humanity that we will see in the coming years.

Despite the importance and amount of research activity devoted to assimilation and contrast processes by social psychologists there has been no volume that is devoted to this topic. Assimilation and contrast in social psychology consists of original essays on classic and contemporary developments concerning assimilation and contrast. The editors have invited a set of leading researchers who represent a wide range of theory evidence and application of these phenomena. The book will also include a chapter presenting a historical survey of relevant developments in psychophysics and social and cognitive psychology. A closing chapter will provide a synthesis and suggest future directions. This volume is suitable for professionals graduate students and

advanced undergraduates

the supranational system is still under construction and will be so for at least some decades before it can be called a consistent system with an intrinsic logic sentencing and sanctioning is one of the issues in which this becomes clear the ICC complementarity principle the principle of legality the execution of sanctions and the relation of the supranational system to domestic systems such as the Rwandan Gacaca are all topics to be thoroughly discussed the uplifting of a penal system from a relatively small community an individual state with relative agreement on basic aspects of punishing to the mondial per definition heterogeneous level where no such agreement exists reveals many controversies opinions on all aspects of sanctioning differ widely all over the world what is the proper sanction for a crime against humanity or an act of genocide and whom to punish controversy exists regarding states children child soldiers and mentally incapable offenders as punishable subjects questionable also are the goals of the supranational criminal justice system and whether these goals are achieved too often these supranational goals seem to be supra natural as well goals steer the system in choosing the number of accused to be prosecuted and judged and the quality of its proceedings but also questions such as whether a detainee has the right to be visited by a prostitute these are some of the questions that are highlighted in this fourth volume of the supranational criminal law series

the critique of the quantum power of judgement analyzes the a priori principles which underlie the empirical knowledge provided by quantum theory in contrast to other transcendental approaches to quantum physics none of the transcendental principles established by Kant is modified in order to cope with the new epistemological situation that arises with the assumption of the quantum postulate rather by considering Bohr's views it is argued that classical concepts provide the mathematical formalism of quantum theory with physical reference through symbolic analogies in the strict Kantian sense the main result of the investigation is the determination of the highest principle under which quantum objects are subsumed this principle states that the conditions of the possibility of the systematic unity of contextual experience are at the same time the conditions of the possibility of quantum objects upon this principle rests the possibility of any a priori synthetic knowledge of quantum objects therefore the critique of the
