

Sense Organs Question Answer

1. Sense organs are the organs that receive information from the environment and send it to the brain for processing. The five main sense organs are the eyes, ears, nose, tongue, and skin. The eyes receive visual information, the ears receive auditory information, the nose receives olfactory information, the tongue receives taste information, and the skin receives touch, pressure, and temperature information. These sense organs are interconnected and work together to provide a complete picture of the environment. For example, when we smell a flower, our brain receives information from both the olfactory receptors in our nose and the visual receptors in our eyes, allowing us to identify the flower by both smell and sight. Another example is when we touch a hot object, our brain receives information from the temperature receptors in our skin, which then triggers a reflex to pull our hand away from the heat. In this way, our sense organs work together to help us survive and thrive in our environment.

2. The five sense organs are the eyes, ears, nose, tongue, and skin. The eyes receive visual information, the ears receive auditory information, the nose receives olfactory information, the tongue receives taste information, and the skin receives touch, pressure, and temperature information. These sense organs are interconnected and work together to provide a complete picture of the environment.
