abstract this book explores the factors that influence the acceptance or rejection of the big bang theory and the theory of biological evolution the rejection of either theory can occur despite the time that has elapsed since the original theories were proposed and their wider acceptance the study critically examines the biographies of individuals establishing the factors that influence their rejection or acceptance of either theory the book concludes that individuals are affected by multiple factors and explores how these findings may contradict other studies which identify religious belief as the driver for rejection the author proposes an original theory of opinion formation that is specific to both scientific theories and suggests the use of inclusive teaching methods and historical narrative within science lessons which may assist in explaining to students the story of discovery of each scientific theory as well as teaching the theory itself the study also concludes that the rejection of both theories particularly by older participants may be linked to past discredited theories including the steady state theory and the theory of panspermia

includes section reviews of recent theological literature
