special topics in structural dynamics experimental techniques volume 5 proceedings of the 40th mac a conference and exposition on structural dynamics 2022 the fifth volume of nine from the conference brings together contributions to this important area of research and engineering the collection presents early findings and case studies on fundamental and applied aspects of structural dynamics including papers on analytical methods emerging technologies for structural dynamics engineering extremes experimental techniques finite element techniques

pt 1 the opportunity for the field testing of an isolated viaduct arose out of the demolition and reconstruction of the i 680 r 24 interchange in walnut creek california the southern section of the temporary separator bridge is seismically isolated and this portion was the subject of a three phase field study this viaduct is the first new bridge in california to be seismically isolated the primary objective of this investigation was to collect field data for the determination of the dynamic properties mode shapes modal frequencies and damping ratios of the viaduct to assess the contribution of different structural components to the overall flexibility and damping characteristics of the structure and to conduct analytical studies to verify the experimentally computed dynamic properties

a follow on to micro and nanotechnology for space systems this second monograph in the series uses the more universal term microengineering to define the discipline and processes that lead to the development of an integrated and intelligent microinstrument microengineering technology for space systems addresses specific issues concerning areas for asim application in current space systems operation in the space environment ultra high density packaging and nonsilicon materials processing tools and the feasibility of the nanosatellite concept
