how are german capitalism and german business management to be understood from the perspective of japan both germany and japan as defeated nations in world war ii received significant american leadership and support after the war both countries developed their enterprises industries and economy by deploying and adapting technology and management methods from the united states while establishing systems of industrial concentration in their own ways by these means both nations became major trading countries however current economic and business conditions differ greatly between germany and japan in trade american influence on japanese business is still strong japan could not and cannot establish a complementary relationship with american industrial sectors and their products in the

american market in addition a common market structure like the e u does not exist in asia in contrast to japan germany developed independently from the american influence and became part of a well integrated regional economy what were the driving forces that created those differences that question is approached from a japanese point of view in this book based on the assumption that the origins of distinct characteristics of german business management after world war ii were developed in the 1950s and 60s the book analyzes the transformation of business management in germany and explains the characteristics and structures of german management the author describes how the development of german companies determined the current german condition the europeanization of germany while the world faced the globalization process demonstrating the basic foundation of european integration by analyzing market factors in europe as well as the internal structural transformation of management in germany this book is a valuable resource for undergraduate and graduate students educators and researchers in the fields of businessmanagement business history and economic history

the objective of this book is to analyze and compare the processes of corporate expansion of postwar japan and germany it examines the evolution of distinctive japanese and german business management styles through the adoption of american management methods thereby establishing a system of industrial concentration in contrast to the us de concentration policy this is the first time that the book draws on a range of topics related to business administration including the concentration of enterprises management and production systems management education marketing organizational structure and corporate governance the book compares the japanese and german models japanese enterprises developed a management style that was suitable for american and japanese markets in part due to the underdeveloped asian markets meanwhile german enterprises established a management style for european markets the book considers the specificities of the japanese management model predicated on thorough cost reduction and few product defects in contrast the german management model placed a premium on differentiation based on product quality and functionality with a particular focus on core markets and the skills of the workforce the book posits that corporate expansion was a determining factor in the regionalization of each country japan underwent a transformation toward asianization which depended on production and markets in asia after the 1990s germany on the other hand consistently pursued europeanization after the war in two complementary ways 1 a heavy reliance on the european region and 2 the endeavor to advance european integration transformations in business management are analyzed using the author s two original frameworks 1 the term total system of business management denotes the fundamental conditional structures that regulate and define the established methods of business management within the confines of capitalism in a specific country 2 the term reframing is used to explain the adaptation modification and adjustment of one country s particular management style to another nation these arguments reframe how we understand the historical processes of corporate expansion and provide milestones for a comparative study of management through common factors and characteristics of management

this book makes an important contribution to an assessment of the company s role in this period of history and at the same time provides important insight into the social and economic history of the weimar republic and the third reich book jacket
