this groundbreaking book now available in paperback reports on an explosive new design field the design of information to improve clarify and facilitate processes of communication and learning as the world responds to a burgeoning information superhighway the structure and design of data becomes increasingly important this book shows how the presentation of information can make complex material clear and accessible to illustrate the book presents projects by 20 world class designers including david macaulay clement mok nigel holmes peter bradford and krzysztof lenk each contributor has provided an essay describing his or her project and the process involved in its development

architects who engaged with cybernetics artificial intelligence and other technologies poured the foundation for digital interactivity in architectural intelligence molly wright steenson explores the work of four architects in the 1960s and 1970s who incorporated elements of interactivity into their work christopher alexander richard saul wurman cedric price and nicholas negroponte and the mit architecture machine group all incorporated technologies including cybernetics and artificial intelligence into their work and influenced digital design practices from the late 1980s to the present day alexander long before his famous 1977 book a pattern language used computation and structure to visualize design problems wurman popularized the notion of information architecture price designed some of the first intelligent buildings and negroponte experimented with the ways people experience artificial intelligence even at architectural scale steenson investigates how these architects pushed the boundaries of architecture and how their technological experiments pushed the boundaries of technology what did computational cybernetic and artificial intelligence researchers have to gain by engaging with architects and architectural problems and what was this new space that emerged within these collaborations at times steenson writes the architects in this book characterized themselves as anti architects and their work as anti architecture the projects steenson examines mostly did not result in constructed buildings but rather in design processes and tools computer programs interfaces digital environments alexander wurman price and

negroponte laid the foundation for many of our contemporary interactive practices from information architecture to interaction design from machine learning to smart cities

shows how to use both aesthetics and mechanics to create distinctive cohesive web sites that work cover

information architecture is about organizing and simplifying information designing and integrating information spaces systems and creating ways for people to find and interact with information content its goal is to help people understand and manage information and make the right decisions accordingly this updated and revised edition of the book looks at integrated information spaces in the web context and beyond with a focus on putting theories and principles into practice in the ever changing social organizational and technological contexts information architects not only design individual information spaces e g websites software applications and mobile devices but also tackle strategic aggregation and integration of multiple information spaces across websites channels modalities and platforms not only do they create predetermined navigation pathways but they also provide tools and rules for people to organize information on their own and get connected with others information architects work with multi disciplinary teams to determine the user experience strategy based on user needs and business goals and make sure the strategy gets carried out by following the user centered design ucd process via close collaboration with others drawing on the authors extensive experience as hci researchers user experience design practitioners and information architecture instructors this book provides a balanced view of the ia discipline by applying theories design principles and guidelines to ia and ux practices it also covers advanced topics such as iterative design ux decision support and global and mobile ia considerations major revisions include moving away from a web centric view toward multi channel multi device experiences concepts such as responsive design emerging design principles and user centered methods such as agile lean ux and design thinking are discussed and related to ia processes and practices

with increasing intensity caad computer aided architectural design is determining the daily work of today s architectural offices computers allow complex designs to be visualized and altered with great speed and accuracy three dimensional models can be created with simulation and animation possibilities and links to the world wide provide access to a flow of information the author develops his thesis that these aspects do not just enable the creative process to be optimized in a quantitative sense but also qualitatively alongside the spatial and time dimensions the new electronic possibilities provide a fifth dimension in architecture

the popularity of enterprise architecture ea has increased in the

last two decades in both business and academic domains despite the
cumulative interest from all sectors the implementation and practice
of ea have been entangled with numerous challenges and complexities
consequently some organisations continue to theorise the concept
which has ramifications on practice and return on investment roi
this has led to many studies that have been conducted to understand
the complexities impacting the implementation and practice of ea in
organisations yet the trajectory of some convolutions remains
mystery in many quarters this attributes to the struggle to
articulate the value of ea in many environments hence many
organisations find it difficult to apply ea for strategic management
of modern information technology it solutions enterprise
architecture for strategic management of modern it solutions
provides guidance on how to employ ea in deploying and managing it
solutions from pragmatic and implementable strategies perspectives
until now implementation and practice of ea have been slow despite
its growing popularity and interest from all sectors the author
employs sociotechnical theories such as actor network theory ant and
structuration theory st as lenses to examine and explain why and how
challenges and complexities exist and derail the implementation or
practice of ea in organisations by doing so this serves to enable
practitioners and readers to gain fresh insights on why the
challenges exist and how they can be addressed in creating
collaborative capabilities for business enhancement sustainability
and competitiveness the book provides detailed insights on how to
apply ea for organisational purposes from three main fronts first it
explains the implications that lack of understanding of ea have on
organisational activities and processes second it examines the
challenges and complexities that hinder the implementation and
practice of ea in organisations third it proposes models and
frameworks on how ea can be applied for strategic management of
modern it solutions in organisations written for postgraduates
researchers academics and professionals in the fields of ea it and
information systems this book provides a valuable resource that will
enable and enhance implementation and practice of ea including
future studies

pervasive information architecture explains the why and how of
pervasive information architecture ia through detailed examples and
real world stories it offers insights about trade offs that can be
made and techniques for even the most unique design challenges the
book will help readers master agile information structures while
meeting their unique needs on such devices as smart phones gps
systems and tablets the book provides examples showing how to model
and shape information to adapt itself to users needs goals and
seeking strategies reduce disorientation and increase legibility and
way finding in digital and physical spaces and alleviate the
frustration associated with choosing from an ever growing set of
information services and goods it also describes relevant
connections between pieces of information services and goods to help
users achieve their goals this book will be of value to

practitioners researchers academics andstudents in user experience design usability information architecture interaction design hci web interaction interface designer mobile application design development and information design architects and industrial designers moving into the digital realm will also find this book helpful master agile information structures while meeting the unique user needs on such devices as smart phones gps systems and tablets find out the why and how of pervasive information architecture ia through detailed examples and real world stories learn about trade offs that can be made and techniques for even the most unique design challenges

this book connects the different topics and professions involved in information technology approaches to architectural design ranging from computer aided design building information modeling and programming to simulation digital representation augmented and virtual reality digital fabrication and physical computation the contributions include experts academic and practical experiences and findings in research and advanced applications covering the fields of architecture engineering design and mathematics what are the conditions constraints and opportunities of this digital revolution for architecture how do processes change and influence the result what does it mean for the collaboration and roles of the partners involved and last but not least how does academia reflect and shape this development and what does the future hold following the sequence of architectural production from design to fabrication and construction up to the operation of buildings the book discusses the impact of computational methods and technologies and its consequences for the education of future architects and designers it offers detailed insights into the processes involved and considers them in the context of our technical historical social and cultural environment intended mainly for academic researchers the book is also of interest to master s level students
