this volume highlights some of the multidisciplinary aspects of automatic signature verification the first two chapters serve as an introduction the first constitutes a review of the literature of the past five years the second addresses the problem of parallel strategies to construct and optimize feature vectors to describe a signature the remaining six chapters are divided into two sections research on static systems and research on dynamic systems the section on off line systems describes a system based on cooperative neural networks for the automatic processing of signatures on checks for background removal as well as a model based system that segments the signature into elements which are then processed locally and globally to evaluate the similarity between two specimens the three papers on on line systems compare three verification methods based on statistical models of signature features using the same benchmark describe a

step wise verification method based on the analysis of the signature components and describe the different design phases of an operational system focusing on the various decisions that have to be made throughout the development of such a prototype

the book constitutes the refereed proceedings of the 7th international conference on verification model checking and abstract interpretation vmcai 2007 held in nice france in january 2007 this event was co located with the symposium on principles of programming languages popl 2007 the 21 revised full papers presented together with three invited lectures and three invited tutorials were carefully reviewed and selected from a total of 85 submissions
