this report describes a technique for gathering information from a multitude of sensors in a given environment and integrating it into a coherent and comprehensive environment model em the focus of this effort is on the use of multiple perspective interactive video technology for intelligent video monitoring of environments the technology developed was applied to two scenarios the surveillance of a room used as a library and the surveillance of

a parking lot an overall architecture was developed one for each scenario for the first scenario library four cameras were used to monitor the activity in the room the system worked on two pcs and monitored activity like stealing an object loitering near a bookshelf and jumping on a table the second scenario parking lot included three cameras the system monitored activity like pedestrians going near several cars cars entering the parking lot at excessive speed and cars remaining in the same spot for more than a specified amount of time

a chilling account of the tradeoff we are willing to make between interactive media technologies and the power of others to watch over and control us this brave new world of electronic marketing and consumption actually lulls consumers into blissful ignorance of how that usage can be and is being monitored
