there is a renaissance that is occurring in chemical and process engineering and it is crucial for today's scientists, engineers, technicians, and operators to stay current with so many changes over the last few decades in equipment and processes. Petroleum refining is almost a living document constantly needing updating with no new refineries being built; companies are spending their capital retooling and adding on to existing plants. Refineries are like small cities today as they grow bigger and bigger and more and more complex. A huge percentage of a refinery can be changed literally from year to year to account for the type of crude being refined or to integrate new equipment or processes. This book is the most up to date and comprehensive coverage of the most significant and recent changes to petroleum refining, presenting the state of the art to the engineer, scientist, or student. Useful as a textbook, this is also an excellent handy go to reference for the veteran engineer. A volume in a chemical or process engineering library should be without. Written by one of the world's foremost authorities, this book sets the standard for the industry and is an integral part of the petroleum refining renaissance. It is truly a must have for any practicing engineer or student in this area.

The subject of this book is truly original by encoding of algebraic equations into graphs. Originally a purely pedagogical technique, the exploration of physics and physical chemistry reveals common pictures through all disciplines. The hidden structure of the scientific formalism that appears is a source of astonishment and provides efficient simplification.
