this book offers a compendium of diverse essays on emerging legal issues in outer space written by experts in the field of space law from different parts of the globe the book comprehensively addresses opportunities in space and the inevitable legal challenges that these space activities pose for mankind it explores the increasing role of private sector in outer space which calls for a review of policy and legislation invites opinio juris from law scholars for ensuring the applicability of the outer

space treaty on all states without ratification and universal abidance with space law without demur reflects upon the challenges for the global space community involved in implementing a more effective approach to international space governance and considers the use of domestic laws and the consequent need for legal reform to encourage broader engagement with commercial space innovation further the book delves into the adequacy of existing international liability regime to protect space tourists in the event of a space vehicle accidents examines the increasing use of space for military activities and canvasses how international law may apply to condition behaviour highlights the challenges of scavenging space debris calls for protections of space assets touches upon the legal regime pertaining to asat and discusses other ways of creating normative instruments which also come from other areas and use other methods given its comprehensive coverage of opportunities in space and the inevitable legal challenges that they pose the book offers a valuable resource for students researchers academics and professionals including government officials industry executives specialists and lawyers helping them understand essential contemporary issues and developments in space law

increasingly public space provision and management are being transferred from the public sector to real estate developers private sector organisations voluntary groups and community bodies contrasting the more historical horizontal character of london with the intense street life of high rise hong kong this book tells the story of the two cities relationships with non traditional forms of public space governance the authors consider the implications for the publicness of these complex spaces and the challenges and impacts that different forms of provision have on those with a stake in them and on the cities as a whole

in the absence of formal treaty law orbital debris has grown exponentially in our most valuable orbital regions to address this problem many major spacefaring programs have implemented independent laws and policies meant to mitigate the release and overall threat of debris however these individual efforts have not translated into a cohesive international set of regulations to address the growing debris problem fortunately there may exist unappreciated similarities among major international programs either in whole or part that once identified could lay the groundwork for the recognition of customary international law this book reviews a number of major programs in depth and seeks to answer if any commonality among them has likely established customary international law

this thesis investigates the nature and architecture of space governance and how it evolved and can and will evolve further given the absence of a global government or supreme authority the thesis demonstrates that after an initial period of successful development of space governance featuring institutions building and the adoption of space law treaties from the early days in the late 1950s to the mid 1970s space governance as developed by those institutions has largely been stagnated the consequence is that even the most important issues e g space debris militarization and utilization of space natural resources are left insufficiently addressed the thesis follows with analysis of the structure of space governance and reviews theories of decentralized governance aiming to suggest a feasible effective and dynamic model for space governance that will enable a continuous evolution thereof the thesis is therefore about the architecture of global space governance and not about the content of the norms the thesis concludes that the only way to break the governance gridlock is by space governance becoming polycentric allowing it to evolve in a decentralized and incremental manner thus a separate forum for each sub issue areas i e specific issue areas within the issue area of space activities such as militarization of space and space debris led by stakeholders active actors and experts would establish forums create rules for that issue and possibly monitor their application the aggregate of all forums work would be feasible and efficient governance flexible to adapt to changes in fact space governance is already on track to become polycentric increasingly and inevitably as stakeholders and experts establish forums that suggest adopt or push for rules and standards the result is a gradual emergence of numerous decision making centers governance centers producing numerous partially overlapping issue specific regimes still further action is required to transform space governance to a polycentric system a polycentric structure would enable the development of governance under the existing constraints that prevent it from developing otherwise while adverse effects may be associated with polycentric governance systems the advantages of polycentric governance exceed the adverse effects which may be further mitigated in ways which the thesis discusses in terms of policy recommendations the thesis suggests that instead of trying to

fix the monocentric system the policy should be to embrace and facilitate a decentralized polycentric governance system i e to relay to and rely on the work of separate governance centers to divert governance building efforts to be invested in support of the establishment and operation of these governance centers to acknowledge the major role of stakeholders and experts i e in the linkage between activities and voice and to mitigate the adverse effects of polycentric governance after presenting the case for polycentric space governance the thesis continues to analyse the governance of two sub issue areas space natural resources and space warfare the normative recommendations for space governance may also suit the governance of other issue areas in global affairs
