the artificial life term appeared more than 20 years ago in a small corner of new mexico usa since then the area has developed dramatically many researchers joining enthusiastically and research groups sprouting everywhere this frenetic activity led to the emergence of several strands that are now established fields in themselves we are now reaching a stage that one may describe as maturer with more rigour more benchmarks more results more stringent acceptance criteria more applications in brief more sound science this which is the natural path of all new areas comes at a price however a certain enthusiasm a certain adventurousness from the early years is fading and may have been lost on the way the field has become more reasonable to counterbalance this and to encourage lively discussions a conceptual track where papers were judged on criteria like importance and or novelty of the concepts proposed rather than the experimental theoretical results has been introduced this year a conference on a theme as broad as artificial life is bound to be very diverse but a few tendencies emerged first fields like robotics and autonomous agents or evolutionary computation are still extremely active and keep on bringing a wealth of results to the artificial life community even there however new tendencies appear like collective robotics and more specifically self assembling robotics which represent now a large subsection second new areas appear
