the author's lectures contact manifolds in Riemannian geometry volume 509 1976 in the Springer Verlag Lecture Notes in Mathematics series have been out of print for some time and it seems appropriate that an expanded version of this material should become available the present text deals with the Riemannian geometry of both symplectic and contact manifolds although the book is more contact than symplectic this work is based on the recent research of the author his students colleagues and other scholars the author's graduate courses at Michigan State University and the earlier lecture notes

chapter 1 presents the general theory of symplectic manifolds principal circle bundles are then discussed in chapter 2 as a prelude to the boothby wang fibration of a compact regular contact manifold in chapter 3 which deals with the general theory of contact manifolds chapter 4 focuses on rie mannian metrics associated to symplectic and contact structures chapter 5 is devoted to integral submanifolds of the contact subbundle in chapter 6 we discuss the normality of almost contact structures sasakian manifolds k contact manifolds the relation of contact metric structures and cr structures and cosymplectic structures chapter 7 deals with the important study of the curvature of a contact metric manifold in chapter 8 we give a selection of results on submanifolds of kahler and sasakian manifolds including an illus tration of the technique of a ros in a theorem of f urbano on compact minimal lagrangian sub manifolds in cpn

an introduction to differentiable manifolds and riemannian geometry

this is a research monograph covering the majority of known results on the problem of constructing compact symplectic manifolds with no kaehler structure with an emphasis on the use of rational homotopy theory in recent years some new and stimulating conjectures and problems have been formulated due to an influx of homotopical ideas examples include the lupton oprea conjecture the benson gordon conjecture both of which are in the spirit of some older and still unsolved problems e g thurston s conjecture and sullivan s problem our explicit aim is to clarify the interrelations between certain aspects of symplectic geometry and homotopy theory in the framework of the problems mentioned above we expect that the reader is aware of the basics of differential geometry and algebraic topology at graduate level

the second edition of this text has sold over 6 000 copies since publication in 1986 and this revision will make it even more useful this is the only book available that is approachable by beginners in this subject it has become an essential introduction to the subject for mathematics students engineers physicists and economists who need to learn how to apply these vital methods it is also the only book that thoroughly reviews certain areas of advanced calculus that are necessary to understand the subject line and surface integrals divergence and curl of vector fields

this text on contact topology is a comprehensive introduction to the subject including recent striking applications in geometric and differential topology eliasberg s proof of cerf s theorem via the classification of tight contact structures on the 3 sphere and the kronheimer mrowka proof of property p for knots via symplectic fillings of contact 3 manifolds starting with the basic differential topology of contact manifolds all aspects of 3 dimensional contact manifolds are treated in this book one notable feature is a detailed exposition of eliasberg s classification of overtwisted contact structures later chapters also deal with higher dimensional contact topology here the focus is on contact surgery but other constructions of contact manifolds are described such as open books or fibre connected sums this book serves both as a self contained introduction to the subject for advanced graduate students and as a reference for researchers
