in this book john kekes discusses the hard questions we all must face in the course of our lives is there an absolute value that overrides all other considerations must we conform to prevailing conventions do we owe what our country asks of us must justice be done at all costs how should we respond to evil should we forgive wrong actions does shame make life better or worse is it always good to be true to who we are do good intentions justify bad actions are moral values the highest of all values there are reasonable answers to these questions but we find that they often conflict their conflicts compel us to weigh the consequences of how the decisions we make affect ourselves our relationships and our attitude to the society in which we live in this clearly and accessibly written book kekes compares and evaluates the reasons that have been given for and against answers to these hard questions by those who actually faced them by learning from the successes and failures of the decisions others have made we can understand better how we should respond to the hard questions we ourselves face we can then evaluate more reasonably the possibilities open to us and the limitations to which we are subject this approach is an alternative to both the absolutist and the

relativist ways of trying to answer hard questions absolutists have for millennia fruitlessly searched for an authoritative answer that reason requires everyone to accept their failure have led relativists to assume that there comes a point at which we run out of reasons and have no option but to make an arbitrary decision kekes instead offers a message of hope by showing that there are reasonable answers to hard questions which are neither absolute nor arbitrary

a chatbot is expected to be capable of supporting a cohesive and coherent conversation and be knowledgeable which makes it one of the most complex intelligent systems being designed nowadays designers have to learn to combine intuitive explainable language understanding and reasoning approaches with high performance statistical and deep learning technologies today there are two popular paradigms for chatbot construction 1 build a bot platform with universal nlp and ml capabilities so that a bot developer for a particular enterprise not being an expert can populate it with training data 2 accumulate a huge set of training dialogue data feed it to a deep learning network and expect the trained chatbot to automatically learn how to chat although these two approaches are reported to imitate some intelligent dialogues both of them are unsuitable for enterprise chatbots being unreliable and too brittle the latter approach is based on a belief that some learning miracle will happen and a chatbot will start functioning without a thorough feature and domain engineering by an expert and interpretable dialogue management algorithms enterprise high performance chatbots with extensive domain knowledge require a mix of statistical inductive deep machine learning and learning from the web syntactic semantic and discourse nlp ontology based reasoning and a state machine to control a dialogue this book will provide a comprehensive source of algorithms and architectures for building chatbots for various domains based on the recent trends in computational linguistics and machine learning the foci of this book are applications of discourse analysis in text relevant assessment dialogue management and content generation which help to overcome the limitations of platform based and data driven based approaches supplementary material and code is available at github.com/bgalitsky relevance based on parse trees
