advanced calculus is intended as a text for courses that furnish the backbone of the

student s undergraduate education in mathematical analysis the goal is to rigorously present the fundamental concepts within the context of illuminating examples and stimulating exercises this book is self contained and starts with the creation of basic tools using the completeness axiom the continuity differentiability integrability and power series representation properties of functions of a single variable are established the next few chapters describe the topological and metric properties of euclidean space these are the basis of a rigorous treatment of differential calculus including the implicit function theorem and lagrange multipliers for mappings between euclidean spaces and integration for functions of several real variables special attention has been paid to the motivation for proofs selected topics such as the picard existence theorem for differential equations have been included in such a way that selections may be made while preserving a fluid presentation of the essential material supplemented with numerous exercises advanced calculus is a perfect book for undergraduate students of analysis

this open access book constitutes the proceedings of the 30th european symposium on programming esop 2021 which was held during march 27 until april 1 2021 as part of the european joint conferences on theory and practice of software etaps 2021 the conference was planned to take place in luxembourg and changed to an online format due to the covid 19 pandemic the 24 papers included in this volume were carefully reviewed and selected from 79 submissions they deal with fundamental issues in the specification design analysis and implementation of programming languages and systems

the chapters in this volume convey insights from mathematics education research that have direct implications for anyone interested in improving teaching and learning in undergraduate mathematics this synthesis of research on learning and teaching mathematics provides relevant information for any math department or individual faculty member who is working to improve introductory proof courses the longitudinal coherence of precalculus through differential equations students mathematical thinking and problem solving abilities and students understanding of fundamental ideas such as variable and rate of change other chapters include information about programs that have been successful in supporting students

continued study of mathematics the authors provide many examples and ideas to help the reader infuse the knowledge from mathematics education research into mathematics teaching practice university mathematicians and community college faculty spend much of their time engaged in work to improve their teaching frequently they are left to their own experiences and informal conversations with colleagues to develop new approaches to support student learning and their continuation in mathematics over the past 30 years research in undergraduate mathematics education has produced knowledge about the development of mathematical understandings and models for supporting students mathematical learning currently very little of this knowledge is affecting teaching practice we hope that this volume will open a meaningful dialogue between researchers and practitioners toward the goal of realizing improvements in undergraduate mathematics curriculum and instruction

this book collects selected papers written by invited and plenary speakers of the 15th international congress on mathematical physics icmp in the aftermath of the conference in extensive review articles and expository texts as well as advanced research articles the world leading experts present the state of the art in modern mathematical physics new mathematical concepts and ideas are introduced by prominent mathematical physicists and mathematicians covering among others the fields of dynamical systems operator algebras partial differential equations probability theory random matrices condensed matter physics statistical mechanics general relativity quantum mechanics quantum field theory quantum information and string theory all together the contributions in this book give a panoramic view of the latest developments in mathematical physics they will help readers with a general interest in mathematical physics to get an update on the most recent developments in their field and give a broad overview on actual and future research directions in this fascinating and rapidly expanding area

this is volume xxii of twenty two in a collection on 20th century philosophy originally published in 1979 this volume attempts to assess some of the achievements of bertrand russell in philosophy logic and mathematics ethics and politics

the definitive work on avoiding burnout written by the psychologist who is the

leading specialist on the issue an illuminating and useful book for anyone coping with the pressures of work in reclaiming the fire dr steven berglas analyzes the rises and falls of corporate executives middle managers lawyers entrepreneurs and others as they struggle to handle the trappings of successful careers how does one deal with encore anxiety the monotony of having to use talents that are no longer psychologically rewarding why is it that our national obsession with wealth traps people in careers that often lead them to wonder is that all there is and why do highly successful people often set themselves up for disastrous falls dr berglas answers all these questions and many more in this groundbreaking book by discussing real people whose careers have left them feeling pressured burdened and jaded in his most progressive and striking contribution to the literature on career success dr berglas debunks the persistent myth that women suffer more stress and burnout than men he disproves the common claim that women involved both in careers and in family life suffer from trying to have it all and he demonstrates how the drive to form close interpersonal ties a drive that is intrinsic to women can actually prevent both men and women from experiencing burnout in a related analysis of the mentoring process dr berglas shows why it is more important for careerists to build legacies for future generations a process he terms generativity than to become obsessed with their own personal success he proves that the process not only benefits the student but provides the mentor with psychological satisfaction and even improved physical health reclaiming the fire uses the working world not the psychiatric couch as a venue for understanding the psychological and emotional burdens of success it is the first comprehensive account of how to balance self esteem and ambition while maintaining challenge and stimulation throughout your career reclaiming the fire provides insight into why baby boomers are currently suffering an epidemic of career dissatisfaction why women are uniquely suited to cope with the pressures that cause men to suffer burnout and what men can learn from them how to escape golden handcuffs the workaholic devotion to a job that is no longer emotionally satisfying how to cope with anger that threatens to sabotage your career how all professionals can identify the passions that will allow them to sustain and enjoy success throughout their lives
