academic writing for international students of science will help international students to develop their command of academic scientific writing in English. It guides students through the writing process itself and will help them to produce clear well-written and well-organised essays and reports. The book covers a range of issues such as how to explain complex ideas clearly and concisely, how to develop a coherent argument and how to avoid plagiarism by making effective reference to sources through detailed analysis of authentic scientific texts. The book will enhance students' understanding of the nature of academic scientific writing. This will enable them to understand how language and discourse function in a real scientific context. The texts serve as models of good writing and are followed by practice activities which will help students to develop their own writing skills. Key topics include the writing process, academic scientific style, sentence structure, paragraph development, referring to sources, coherence, argument and critical thinking, academic and scientific conventions. This book will be an invaluable companion to those studying for a science or technology degree in an English-speaking institution. Informative study boxes, model answers and a clear comprehensive answer key mean that the book can be used for self-study or with guidance in the classroom.

The last two decades have seen a renaissance in interest in the chemistry of the main group elements. In particular, research on the metals of group 13 (aluminium, gallium, indium and thallium) has led to the synthesis and isolation of some very novel and unusual molecules with implications for organometallic synthesis, new materials development and with biological, medical and environmental relevance. The group 13 metals (aluminium, gallium, indium and thallium) aims to cover new facts, developments and applications in the context of more general patterns of physical and chemical behaviour. Particular attention is paid to the main growth areas including the chemistry of lower formal oxidation states, cluster chemistry, the investigation of solid oxides and hydroxides, advances in the formation of III-V and related compounds, the biological significance of group 13 metal complexes and the growing importance of the metals and their compounds in the mediation of organic reactions. Chapters cover general features of the group 13 elements, group 13 metals in the 3 oxidation state, simple inorganic compounds, formal oxidation state 3 organometallic chemistry, formal oxidation state 2 metal-metal bonded vs mononuclear derivatives, group 13 metals in the 1 oxidation state, mixed or intermediate valence, group 13 metal compounds, aluminium and gallium clusters.

metalloid clusters and their relation to the bulk phases to naked clusters and to nanoscaled materials simple and mixed metal oxides and hydroxides solids with extended structures of different dimensionalities and porosities coordination and solution chemistry of the metals biological medical and environmental relevance iii v and related semiconductor materials group 13 metal mediated organic reactions the group 13 metals aluminium gallium indium and thallium provides a detailed wide ranging and up to date review of the chemistry of this important group of metals it will find a place on the bookshelves of practitioners researchers and students working in inorganic organometallic and materials chemistry
