doing honest work in college stands on three principles do the work you say you do give others credit and present your research fairly these are straightforward concepts but the abundance of questionable online sources and temptation of a quick copy paste can cause confusion as to what is considered citing and what is considered cheating this guide starts out by clearly defining plagiarism and other forms of academic dishonesty and then gives students the tools they need to avoid those pitfalls this edition addresses the acceptable use of mobile devices on tests the proper approach to sources such as podcasts or social media posts and the limitations of citation management software

what is computational intelligence ci traditionally ci is understood as a collection of methods from the fields of neural networks nn fuzzy logic and evolutionary computation various definitions and opinions exist but what belongs to ci is still being debated see e.g. [1, 3] more recently there has been a proposal to define the ci not in terms of the tools but in terms of challenging problems to be solved [4] with this edited volume i have made an attempt to give a representative sample of contemporary ci activities in automotive applications to illustrate the state of the art while ci research and achievements in some specialized fields described see e.g. [5, 6] this is the first volume of its kind dedicated to automotive technology as if reflecting the general lack of consensus on what constitutes the field of ci this volume [1] illustrates automotive applications of not only neural and fuzzy computations which are considered to be the standard ci topics but also others such as decision trees graphical models support vector machines svm multi agent systems etc this book is neither an introductory text nor a comprehensive overview of all ci research in this area hopefully as a broad and representative sample of ci activities in automotive applications it will be worth reading for both professionals and students when the details appear insufficient the reader is encouraged to consult other relevant sources provided by the chapter authors
