an introduction to the statistical theory of classical simple dense fluids covers certain aspects of the study of dense fluids based on the analysis of the correlation effects between representative small groupings of molecules the book starts by discussing empirical considerations including the physical characteristics of fluids measured molecular spatial distribution scattering by a continuous medium the radial distribution function the mean potential and the molecular motion in liquids the text describes the application of the theories to the description of dense fluids i e interparticle force classical particle trajectories and the liouville theorem and the deduction of expressions for the fluid thermodynamic functions the theory of equilibrium short range order by using the concept of closure approximation or total correlation some numerical consequences of the equilibrium theory and irreversibility are also looked into the book further tackles the kinetic derivation of the maxwell boltzmann mb equation the statistical derivation of the mb equation the movement to equilibrium gas in a steady state and viscosity and thermal conductivity the text also discusses non equilibrium liquids physicists chemists and engineers will find the book invaluable

this book advocates for a new analytical framework that extends our understanding of multimodal meaning making in the novel integrating theoretical traditions from stylistics and the influential social semiotic approach to multimodal communication developed by kress and van leeuwen nørsgaard applies this method of analysis in order to build on existing stylistic practices that look at linguistic features in the novel to encompass other semiotic resources found in the form such as typography layout images paper and book cover design the volume grounds the discussion with supporting examples from novels that feature experimentation with multiple semiotic resources as well as more traditional novels furthering the argument that all novels are inherently multimodal offering new insights and tools for unpacking multimodal meaning making in this critical literary genre this volume is an indispensable resource for graduate students and researchers in multimodality stylistics and literary studies
