this book is about relations between three different areas of mathematics and theoretical computer science combinatorial

group theory cryptography and complexity theory it explores how non commutative infinite groups which are typically studied in combinatorial group theory can be used in public key cryptography it also shows that there is remarkable feedback from cryptography to combinatorial group theory because some of the problems motivated by cryptography appear to be new to group theory and they open many interesting research avenues within group theory in particular a lot of emphasis in the book is put on studying search problems as compared to decision problems traditionally studied in combinatorial group theory then complexity theory notably generic case complexity of algorithms is employed for cryptanalysis of various cryptographic protocols based on infinite groups and the ideas and machinery from the theory of generic case complexity are used to study asymptotically dominant properties of some infinite groups that have been applied in public key cryptography so far this book also describes new interesting developments in the algorithmic theory of solvable groups and another spectacular new development related to complexity of group theoretic problems which is based on the ideas of compressed words and straight line programs coming from computer science

this volume contains the invited lectures invited symposia symposia papers and posters presented at the 2nd european cognitive science conference held in greece in may 2007 the papers presented in this volume range from empirical psychological studies and computational models to philosophical arguments meta analyses and even to neuroscientific experimentation the quality of the work shows that the cognitive science society in europe is an exciting and vibrant one there are 210 contributions by cognitive scientists from 27 different countries including usa france uk germany greece italy belgium japan spain the netherlands and australia this book will be of interest to anyone concerned with current research in cognitive science
