structured matrices serve as a natural bridge between the areas of algebraic computations with polynomials and numerical matrix computations allowing cross fertilization of both fields this book covers most fundamental numerical and algebraic computations with toeplitz hankel vandermonde cauchy and other popular structured matrices throughout the computations the matrices are represented by their compressed images called displacements enabling both a unified treatment of various matrix structures and dramatic saving of computer time and memory the resulting superfast algorithms allow further dramatic parallel acceleration using fft and fast sine and cosine transforms included are specific applications to other fields in particular superfast solutions to various fundamental problems of computer algebra the tangential nevanlinna pick and matrix nehari problems the primary intended readership for this work includes researchers algorithm designers and advanced graduate students in the fields of computations with structured matrices computer algebra and numerical rational interpolation the book goes beyond research frontiers and apart from very recent research articles includes yet unpublished results to serve a wider audience the presentation unfolds systematically and is written in a user friendly engaging style only some preliminary knowledge of the fundamentals of linear algebra is required this makes the material accessible to graduate students and new researchers who wish to study the rapidly exploding area of computations with structured matrices and polynomials examples tables figures exercises extensive bibliography and index lend this text to classroom use or self study

wireless sensor networks came into prominence around the start of this millennium motivated by the omnipresent scenario of small sized sensors with limited power deployed in large numbers over an area to monitor different phenomenon the sole motivation of a large portion of research efforts has been to maximize the lifetime of the network where network lifetime is typically measured from the instant of deployment to the point when one of the nodes has expended its limited power source and becomes in operational commonly referred as first node failure over the years research has increasingly adopted ideas from wireless communications as well as embedded systems development in order to move this technology closer to realistic deployment scenarios in such a rich research area as wireless sensor networks it is difficult if not impossible to provide a comprehensive coverage of all relevant aspects in this book we hope to give the reader with a snapshot of some aspects of wireless sensor networks research that provides both a high level overview as well as detailed discussion on

specific areas
