this book comprises select proceedings of the international conference etaeere 2020 and
 focuses on contemporary issues in energy management and energy efficiency in the context
 of power systems the contents cover modeling simulation and optimization based studies on
 topics like medium voltage btb system cost optimization of a ring frame unit in textile
 industry rectenna for rf energy harvesting ecology and energy dimension in infrastructural
 designs study of agc in two area hydro thermal power system energy efficient and reliable
 depth based routing protocol for underwater wireless sensor network and power line
 communication this book can be beneficial for students researchers as well as industry
 professionals

in order to address the twenty first century challenges of decarbonisation energy security and cost effectiveness it is essential to understand whole energy systems and the interconnection and interaction between different components an integrated language is therefore needed to assist energy policymakers and to help industrial stakeholders assess future energy systems and infrastructure and make realistic technical and economic decisions whole energy system dynamics provides an interdisciplinary approach to whole energy systems providing insights and understanding of it in the context of challenges opportunities and solutions at different levels and time steps it discusses approaches across disciplinary boundaries as well as existing issues within three main themes theory modelling and policy and their interlinkage with geopolitics markets and practice spataru argues that there is an urgent need for a whole energy system integration this is necessary for effective analysis design and control of the interactions and interdependencies involved in the technical economic regulatory and social dimensions of the energy system this book is essential reading for students interested in the area of energy systems policy and modelling it is also a valuable read for policymakers professionals researchers academics engineers and industrial stakeholders

intelligent systems for rehabilitation engineering encapsulates different case studies where technology can be used as assistive technology for the physically challenged visually and hearing impaired rehabilitation engineering includes the development of technological solutions and devices to assist individuals with disabilities while also supporting the recovery of the disabled who have lost their physical and cognitive functions these systems can be designed and built to meet a wide range of needs that can help individuals with mobility communication vision hearing and cognition the growing technological developments in machine learning deep learning robotics virtual intelligence etc play an important role in rehabilitation engineering intelligent systems for rehabilitation engineering focuses on

trending research of intelligent systems in rehabilitation engineering which involves the design and development of innovative technologies and techniques including rehabilitation robotics visual rehabilitation physical prosthetics brain computer interfaces sensory rehabilitation motion rehabilitation etc this groundbreaking book provides a comprehensive reference covering different computer assistive techniques for the physically disabled visually and hearing impaired focuses on trending research of intelligent systems in rehabilitation engineering which involves the design and development of innovative technologies and techniques provides insights into the role of intelligent systems in rehabilitation engineering audience engineers and device manufacturers working in rehabilitation engineering as well as researchers in computer science artificial intelligence electronic engineering who are working on intelligent systems

storing energy with special reference to renewable energy sources second edition has been fully revised and substantially extended to provide up to date and essential discussion that will support the needs of the world s future energy and climate change policies new sections cover thermal energy storage tidal storage sustainability issues in relation to storing energy and impacts on global energy markets various systems are discussed including mechanical kinetic thermal electrochemical and other chemical as well as other emerging technologies incorporating advancements described in the book will help the people of the world further overcome the problems related to future energy and climate change covers all types of energy storage systems allowing and encouraging comparisons to be made written by world experts in the field to provide the latest developments in this fast moving and vital technology covers the technical environmental social and political aspects related to the storing of energy and in particular renewable energy

this book presents the select proceedings of the second international conference on recent advances in mechanical engineering rame 2020 the topics covered include aerodynamics and fluid mechanics automation automotive engineering composites ceramics and polymers processing computational mechanics failure and fracture mechanics friction tribology and surface engineering heating and ventilation air conditioning system industrial engineering ic engines turbomachinery and alternative fuels machinability and formability of materials mechanisms and machines metrology and computer aided inspection micro and nano mechanics modelling simulation and optimization product design and development rapid manufacturing technologies and prototyping solid mechanics and structural mechanics thermodynamics and heat transfer traditional and non traditional machining processes vibration and acoustics the book also discusses various energy efficient renewable and non renewable resources and technologies strategies and technologies for sustainable development and energy environmental interaction the book is a valuable reference for beginners researchers and professionals interested in sustainable construction and allied fields

the book covers recent developments in applications of fuzzy logic techniques in power system control planning operation and design including problems of incorporating human expert knowledge in modeling simulation and optimization it gives readers a complete picture of fuzzy sets implementation in power systems demonstrating benefits by presentation of practical application and case studies this book introduces power system engineers and managers researchers undergraduate and postgraduate students to fuzzy logic techniques by offering new solution for practical power system problems it also aims at the fuzzy logic and computer societies presenting their members a new attractive field fuzzy logic application and computation
