a state of the art collection of readily reproducible laboratory methods for assessing chemosensitivity in vitro and in vivo and for assessing the parameters that modulate chemosensitivity in individual tumors chemosensitivity volume 2 in vivo models imaging and molecular regulators contains cutting edge protocols for classifying tumors into response categories and for customizing therapy to individuals these readily reproducible techniques allow measurements of dna damage apoptotic cell death and the molecular and cellular regulators of cytotoxicity as well as in vivo animal modeling of chemosensitivity a companion volume volume 1 in vitro assays contains in vitro and in vivo techniques to identify which new agents or combination of agents are effective for each type of tumor

for both volumes expert investigators describe not only the classic methods but also the many novel techniques they have perfected for the transfer of large dnas into the cells of both microbes and animals via large insert recombinant dnas volume 1 presents readily reproducible techniques for library construction physical mapping and sequencing an accompanying volume volume 2 functional studies provides a wide variety of methods and applications for functional analysis of the dna transformed organisms besides protocols each chapter includes scientific reviews software tools database resources genome sequencing strategies and illustrative case studies

despite the availability of an effective vaccine there are still 400 million people worldwide who are chronically infected with hepatitis b virus hbv for them the vaccine as currently applied has no value given the possible consequences of hbv infection the number of those chronically infected with hbv presents an enormous public health challenge for example the major etiology of hepatocellular carcinoma hcc is chronic infection with hbv although fifth in cancer incidence worldwide hcc liver cancer is the third leading cause of cancer death the high mortality associated with hcc arises because the disease is often detected late and is unresponsive to treatment the number of deaths caused by phcc is expected to rise over the next 20 years those chronically infected with hbv have a life risk of death to hcc of between 10 and 25 even the limited efficacy of drugs for the treatment of chronic hbv helps underscore the point that this disease is responsive to therapy drugs that target the polymerase e g hepsera and lamivudine and interferon alpha

represent two distinct strategies and show that both conventional antiviral and immunotherapeutic approaches can be used in management however the current inventory of therapeutics is inadequate interferon alpha is of limited value only parenterally available and fraught with adverse reactions

following the considerable success of the first edition of plant virology protocols this exciting new edition covers the many new techniques that are now applied to the examination and understanding of plant viruses each section presents the most novel methods and step by step reproducible laboratory protocols to allow researchers more effective approaches to study plant viruses this updated book will prove indispensable to laboratory investigators studying plant viruses

immunoelectron microscopy is a key technique that bridges the information gap between biochemistry molecular biology and ultrastructural studies placing macromolecular functions within a cellular context in immunoelectron microscopy methods and protocols expert researchers combine the tools of the molecular biologist with those of the microscopist from the molecular biology toolbox this volume presents methods for antigen production by protein expression in bacterial cells methods for epitope tagged protein expression in plant and animal cells allowing protein localization in the absence of protein specific antibodies as well as methods for the production of anti peptide monoclonal and polyclonal antibodies from the microscopy toolbox sample preparation methods for cells plant and animal tissue are presented both cryo methods which have the advantage of retaining protein antigenicity at the expense of ultrastructural integrity as well as chemical fixation methods that maintain structural integrity while sacrificing protein antigenicity have been included with chapters examining various aspects of immunogold labeling written in the highly successful methods in molecular biology™ series format chapters include introductions to their respective topics lists of the necessary materials and reagents step by step readily reproducible laboratory protocols and notes on troubleshooting and avoiding known pitfalls authoritative and essential immunoelectron microscopy methods and protocols seeks to facilitate an increased understanding of structure function relationships

in this authoritative guide expert investigators provide cutting edge chapters dealing with modern plant systems biology approaches this work provides the kind of detailed description and implementation advice that is crucial for getting optimal results

in gene therapy protocols volumes 1 and 2 internationally recognized investigators describe cutting edge laboratory techniques for the study of production and in vivo applications of gene transfer vectors volume 1 and design and characterization of gene transfer vectors volume 2 in this second volume readers will find a comprehensive resource of current and emerging methods for the processing and characterization of viral and non viral gene transfer vectors
