combining theoretical sophistication with a fundamental comprehension of the political institutions of the usa this study aims to demystify the workings of the united states supreme court and its place in democracy

the essays in this volume concern the points of intersection between analytic philosophy and the philosophy of the exact sciences more precisely it concern connections between knowledge in mathematics and the exact sciences on the one hand and the conceptual foundations of knowledge in general its guiding idea is that in contemporary philosophy of science there are profound problems of theoretical interpretation problems that transcend both the methodological concerns of general philosophy of science and the technical concerns of philosophers of particular sciences a fruitful approach to these problems combines the study of scientific detail with the kind of conceptual analysis that is characteristic of the modern analytic tradition such an approach is shared by these contributors some primarily known as analytic philosophers some as philosophers of science but all deeply aware that the problems of analysis and interpretation link these fields together

scientific essay from the year 2012 in the subject literature africa university of nigeria language english abstract theories of language linguistic and non linguistic communication are diverse in the humanities there are so many interpretative tools these tools are means to an end and not the end in themselves just as we have equations in the natural sciences so do we have theoretical frameworks literary criticisms and approaches to literature and the communication arts in the humanities these interpretative tools are keys to opening and analyzing works in the humanities and other disciplines most of these

theories are borrowed from other disciplines other than the ones exploiting them in the literary sciences rooms are given for inter textual interpretations as well as for interdisciplinary and multidisciplinary approaches hence one could analyze a given fiction drama or poem using one or more approaches as the case may be at the primary and secondary school level essays are simply written and novels are simply read and interpreted by simple minds but at the tertiary educational level one would expect the reader the critic or the recipient to be thorough analytical and scientific in his appraisal of the text before him in receptions theory the analytical mind is not left empty handed in this art of researching on or beyond the text for one to access these tools effectively one must be equipped with literary terms interpretative tools are legion some are text centered and linguistic and others are extra textual and non linguistic hermeneutics and the sister theoretical frameworks like the positivism formalism explication de texte new criticism structuralism post structuralism semiotics de construction etc are text centered interpretative tools while the society based theories like marxist socialism psycho analytic theory feminism receptions theory racial theory cultural and intercultural studies literature and the media I

ontology began life in ancient times as a fundamental part of philosophical enquiry concerned with the analysis and categorisation of what exists in recent years the subject has taken a practical turn with the advent of complex computerised information systems which are reliant on robust and coherent representations of their subject matter the systematisation and elaboration of such representations and their associated reasoning techniques constitute the modern discipline of formal ontology which is now being applied to such diverse domains as artificial intelligence computational linguistics bioinformatics gis knowledge engineering information retrieval and the semantic researchers in all these areas are becoming increasingly aware of the need for serious engagement with ontology understood as a general theory of the types of entities and relations making up their respective domains of enquiry to provide a solid foundation for their work the conference series formal ontology in information systems fois provides a meeting point for researchers from these and other disciplines with an interest in formal ontology where both theoretical issues and concrete applications can be explored in a spirit of genuine interdisciplinarity this volume contains the proceedings of the sixth fois conference held in toronto canada during 11 14 may 2010 including invited talks by francis jeffry pelletier john bateman and alan rector and the 28 peer reviewed submissions

this book is about the epistemology of quantum physics and its interpretation as a scientific theory in its technical form the contents of the book are essentially of non formal nature although the formalism of quantum mechanics is also investigated rather briefly inline with the needs and requirements of the epistemological investigation and considerations the reader should note that a general scientific and mathematical background at the undergraduate level is required to understand the book

properly and appreciate its contents the book is like my previous books in style and favorable characteristics such as clarity graduality and intensive cross referencing with hyperlinks in the electronic versions however the book unlike my previous books does not contain questions or exercises or solved problems the book is particularly useful to those who have special interest in the interpretative aspects of quantum theory and the philosophy of science although it should be useful even to those who are interested in the purely scientific and technical aspects of the quantum theory since the contents of the book should broaden the understanding of these aspects and provide them with qualitative and interpretative dimensions as well as the added benefit of the brief investigation of the formalism of quantum mechanics

this volume contains the final revised versions of the best papers presented at the first international workshop on higher order algebra logic and term rewriting held in amsterdam in september 1993 higher order methods are increasingly applied in functional and logic programming languages as well as in specification and verification of programs and hardware the 15 full papers in this volume are devoted to the algebra and model theory of higher order languages computational logic techniques including resolution and term rewriting and specification and verification case studies in total they provide a competently written overview of current research and suggest new research directions in this vigorous area

with quiet eloquence lane sunderland argues that we must reclaim the fundamental principles of the constitution if we are to restore democratic government to its proper role in american life for far too long he contends the popular will has been held in check by an overly powerful supreme court using non constitutional principles to make policy and promote its own political agendas his work shows why this has diminished american democracy and what we can do to revive it sunderland

presents a strong thoughtful challenge to the constitutional theories promoted by ronald dworkin archibald cox richard epstein michael perry john hart ely robert bork philip kurland laurence tribe mark tushnet and catharine mackinnon an enormously diverse group united by an apparent belief in judicial supremacy their theories he demonstrates undermine the democratic foundations of the constitution and the power of the majority to resolve for itself important questions of justice central to this enterprise is sunderland s reconsideration of the federalist as the first most reliable and most profound commentary on the constitution the federalist he states is crucial because it explains the underlying theory of the constitution as a whole a theory that gives meaning to its particular provisions in addition sunderland reexamines the declaration of independence and the work of hobbes locke and montesquieu in order to better define the nature and limits of their influence on the framers his reading of these works in conjunction with the federalist shows just how far afield contemporary commentators have strayed sunderland deliberately echoes and amplifies madison s wisdom in federalist no 10 that the object of the constitution is to secure the public good and private rights and at the same time to preserve the spirit and form of popular government to attain that object he persuasively argues requires that the judiciary acknowledge and enforce the constitutional limitations upon its own powers in an era loudly proclaiming the return of popular government majority rule and the will of the people that argument is especially relevant and appealing
