energy usage and consumption continue to rise globally each year with the most efficient and cost effective energy sources causing huge

impacts to the environment in an effort to mitigate harmful effects to the environment implementing clean energy resources and utilizing green energy management strategies have become worldwide initiatives with many countries from all regions quickly becoming leaders in renewable energy usage still not every energy resource is without flaws researchers must develop effective and low cost strategies for clean energy in order to find the balance between production and consumption the research anthology on clean energy management and solutions provides in depth research that explores strategies and techniques used in the energy production field to optimize energy efficiency in order to maintain clean and safe use while delivering ample energy coverage the anthology also seeks solutions to energy that have not yet been optimized or are still produced in a way that is harmful to the environment covering topics such as hydrogen fuel cells renewable energy solar power solar systems cost savings and climate protection this text is essential for electrical engineers nuclear engineers environmentalists managers policymakers government officials professionals in the energy industry researchers academicians and students looking for the latest research on clean energy management

this book is the result of the second nato advanced study institute on speech processing held at the chateau de bonas france from june 29th to july 10th 1981 this institute provided a high level coverage of the fields of speech transmission recognition and understanding which constitute important areas where research activity has recently been associated with actual industrial developments this book will therefore include both fundamental and applied topics ten survey papers by some of the best specialists in the field are included they give an up to date presentation of several important problems in automatic speech processing as a consequence the book can be considered as a reference manual on some important areas of automatic speech processing the surveys are indicated by a in the table of contents this book also contains research papers corresponding to original works which were presented during the panel sessions of the institute for the sake of clarity the book has been divided into five sections 1 speech analysis and transmission an emphasis has been laid on the techniques of linear prediction lpc and the problems involved in the transmission of speech at various bit rates are addressed in details 2 acoustics and phonetics one of the major bottleneck in the development of speech recognition systems remains the transcription of the

continuous speech wave into some discrete strings or lattices of phonetic symbols two survey papers discuss this problem from different points of view and several practical systems are also described

pitch i.e. fundamental frequency f_0 and fundamental period occupies a key position in the acoustic speech signal the prosodic information of an utterance is predominantly determined by this parameter the ear is more sensitive to changes of fundamental frequency than to changes of other speech signal parameters by an order of magnitude the quality of vocoded speech is essentially influenced by the quality and faultlessness of the pitch measurement hence the importance of this parameter necessitates using good and reliable measurement methods at first glance the task looks simple one just has to detect the fundamental frequency or period of a quasi periodic signal for a number of reasons however the task of pitch determination has to be counted among the most difficult problems in speech analysis 1 in principle speech is a nonstationary process the momentary position of the vocal tract may change abruptly at any time this leads to drastic variations in the temporal structure of the signal even between subsequent pitch periods and assuming a quasi periodic signal is often far from realistic 2 due to the flexibility of the human vocal tract and the wide variety of voices there exist a multitude of possible temporal structures narrow band formants at low harmonics especially at the second or third harmonic are an additional source of difficulty 3 for an arbitrary speech signal uttered by an unknown speaker the fundamental frequency can vary over a range of almost four octaves 50 to 800 Hz

this book provides a timely overview of the impacts of digitalization from the perspective of everyday life and argues that one central issue in digitalization is the development of new types of services that digitalization enables but which are often overlooked due to the focus on new technologies and devices the book summarizes the past 20 years of research into the relationship between information and communications technology ICT and service innovation and reveals that the ongoing digitalization is a qualitatively different phenomenon and represents a true paradigm shift the all encompassing integration and distribution of data raises critical issues such as preserving human dignity and individual autonomy moreover interaction practices that foster broad participation trust learning and a willingness to

share knowledge are called for citizen empowerment and multi actor co creation have become central to using digitalization to support the development of wellbeing and sustainability further the book shows how employees and professionals can and should be involved in designing their future work and in evaluating it proactiveness and participation in innovation endeavours are ways to guarantee meaningful work in an age of socio technical transition the book employs a variety of theoretical approaches and perspectives from diverse disciplines to illustrate these needs in addition to theoretical analyses some specific application areas are examined e g services in health and social care and problems linked to robots in elderly care given its scope the book is highly recommended to all readers seeking an overview of the current understanding of the human side of digitalization and searching for concrete cases from different countries to illustrate the topic
