one of the trends in the global market is the increasing collaboration among enterprises. Constant changes in inter and intra organizational environments will persist in the future. Organizations have to flexibly and continuously react to imminent changes in markets and trading partners. Large companies but also SMEs have to cope with internal changes from both a technical e.g. new information communication software and hardware technologies and an organizational point of view e.g. merging/re-organization, virtual organizations etc. In this context the competitiveness of an enterprise depends not only on its internal performance to produce products and services but also on its ability to seamlessly interoperate with other enterprises. External and internal collaborative work needs more interoperable solutions. The International Workshop on Enterprise Interoperability (IWEI) aims at identifying and discussing challenges and solutions with respect to enterprise interoperability both at the business and the technical level. The workshop promotes the development of a scientific foundation for specifying, analyzing and validating interoperability solutions, an architectural framework for addressing interoperability problems from different viewpoints and at different levels of abstraction, a maturity model to evaluate and rank interoperability solutions with respect to distinguished quality criteria and a working set of practical solutions and tools that can be applied to interoperability problems. To date, IWEI is organized by the IFIP Working Group 5.8 on enterprise interoperability.

IIE Joint Publishers Book of the Year Award 2016 awarded for an outstanding published book that focuses on a facet of industrial engineering improves education or furthers the profession engineering decision making and risk management emphasizes practical issues and examples of decision making with applications in engineering design and management featuring a blend of theoretical and analytical aspects. This book presents multiple perspectives on decision making to better understand and improve risk management processes and decision making systems. Engineering decision making and risk management uniquely presents and discusses three perspectives on decision making problem solving the decision making process and decision making systems. The author highlights formal techniques for group decision making and game theory and includes numerical examples to compare and contrast different quantitative techniques. The importance of initially selecting the most appropriate decision making process is emphasized through practical examples and applications that illustrate a variety of useful processes. Presenting an approach for modeling and improving decision making systems engineering decision making and risk management also features theoretically sound and practical tools for decision making under uncertainty, multi criteria decision making, group decision making, the value of information and risk
