this introductory algebra text based on standards in the *AMATYC Crossroads* document motivates college math students to develop mathematical literacy and a solid foundation for future study in mathematics and other disciplines. This second book of a three-book series presents mathematical concepts and skills through relevant activities derived from real-life situations. These activities are meaningful to students because they illustrate how mathematics arises naturally from real-world situations and problems. The *Mathematics in Action* series is based on the assumption that students learn mathematics best by doing mathematics in a meaningful context. Students take an active role in their own learning by working in groups, thereby developing communication skills, a sense of independence, and a can-do attitude about mathematics. Technology is integrated throughout the book so that students learn to interpret real-life data numerically, symbolically, and graphically, regardless of their level of preparation for the course. Students can use this text to increase their knowledge of mathematics, their problem-solving skills, and their overall confidence in their ability to learn.
