the mathematics of meaning examines the foundation of mathematics the fictions of jose luis borges and the aesthetics of marcel proust as it is unfolded in remembrance of things past in mathematics the logical foundation of reasoning is examined in borges it is the linguistic foundation of narration and in proust the perceptual foundation of aesthetics the three types of studies converge towards the same point because it turns out that in all cases where the foundation becomes indeterminable the concept of infinity plays a decisive role the dynamics of mathematics is decisively dependent on the assumption of the existence of infinite sets in borges the breakdown of narration is metaphorically staged through an impossible object representing an actual infinity in proust it is the concept of infinity implied in leibniz monadism the mathematics of meaning also contains a semiotic theory of form because the breakdown of the foundation is in all three cases uniquely connected to the existence of a form the meaning of which is indeterminable in the situation
