the aim of this book is quite ambitious here we attempt to bridge the gap between soh physicists agronomists horticulturists hydraulic engineers de signers manufacturers and users of drip irrigation systems we believe that progress in drip irrigation hinges on the contributions of professionals made in all related disciplines and their cooperation the last decade has seen great development in the field of drip irrigation al though the drip irrigated area has not increased at the same rate as in the pre vious decade however our understanding of the processes involved in water and solute distribution and in plant response has increased vastly the tools for op timal

design of drip systems have improved tremendously the main progress has been in the development and in the manufacture of sophisticated equipment not only improved types of emitters and laterals but also auxiliary equipment such as new filtration systems controllers and sensors in this book we highlight the need to maintain a proper balance between the hydraulic design of drip systems and aspects of their management and maintenance drip irrigation has a potential for high water use efficiency but many well designed systems suffer from bad management we are indebted to the late eshel bresler for his contribution to our understanding of water and solute movement under drip irrigation and its application to system design some parts of a previous publication entitled drip irrigation manual authored by s dasberg and e

this important book the only complete one stop manual on microirrigation worldwide offers knowledge and techniques necessary to develop and manage a drip trickle or micro irrigation system the simplicity of the contents facilitates a technician to develop an effective micro irrigation system management of drip trickle or micro irrigation includes the basic considerations relating to soil water plant interactions with topics such as methods for soil moisture measurement evapotranspiration irrigation systems tensiometer use and installation principles of drip micro trickle irrigation filtration systems automation chlorination service and maintenance design of drip irrigation and lateral lines the evaluation of uniformity of application and an economical analysis for selecting irrigation technology

improving agricultural water use efficiency wue is vitally important in many parts of the world due to the decreasing availability of water resources and the increasing competition for water between different users micro irrigation is an effective tool for conserving water resources studies have revealed a significant water savings ranging from 40 to 70 under drip irrigation compared with surface irrigation this new volume engineering interventions in sustainable trickle irrigation irrigation requirements and uniformity fertigation and crop performance presents valuable research that evaluates crop water and fertigation requirements examines optimum irrigation and fertigation scheduling and analyzes the performance of agricultural crops under micro irrigation with an interdisciplinary perspective this volume addresses the urgent need to explore and investigates the current shortcomings and challenges of water resources engineering especially in micro irrigation engineering the volume discusses crop water requirements fertigation technology and performance of agricultural crops under best management practices the chapter authors present research studies on drip irrigated tomato chilies cucumber eggplant cabbage garlic sugarcane maize cashew nut sapota banana mango and blueberries removing the research gap this volume provides new information that will be valuable to those involved in micro irrigation engineering
